In the XXI century, “God” remains an unknown value to humans. Although “God” is the fundamental value in this world, as he is the Creator of all. A modern human cannot accept the idea of ??the existence of “God” due to lack of evidence that “God” exists. "Blind faith" is an indicator of low level of development of individuals, and is no longer a common stance of modern people, even those who are not well educated. People are willing to believe only that what they can see with their own eyes, test, and, of course, use in everyday life. That is normal, natural. People only declare that they believe in “God.” No one really believes in him because human intellect is created in such a way that one is unable to take something seriously without evidence. Not to mention that recipes that religion offers as a practical guide—do not hold water from the point of view of a modern person. Also, in the eternal debate of psychologists: what is primary, “soul” or body, “soul loses” only because psychologists do not know anything about it. Despite the fact that “soul” (psyche) is the focus of this "science." Shortfalls of medicine, psychology, anthropology, and other sciences that study human beings affected people's attitude towards religion. However, religion, unlike science, has existed for many centuries. Despite everything, it continues to exist today. This clearly indicates that humanity can exist without science, but not without belief in some “Higher Powers,” something supernatural that, unlike modern science, has the ability to solve any problems of humans. One can admit this to himself or not, it does not matter. And, even more so, it does not matter whether this role is filled by biblical "God" (or those gods, which religions offer to consider gods) or not. As it is known, there are books much older than the Bible, Torah, Quran, etc. Some of these books date tens of millions of years back. Studying one of these books (according to some researchers, this manuscript dates 21st century BC), we found answers to all of our questions because this book turned out to be nothing other than the “Catalog of Human Souls.” It is a catalog because this book contains descriptions of about three hundred models of psyche of homo sapiens. Moreover, it holds detailed instructions on how this or that person can realize the main “Divine Plan”: make himself/herself "the image and likeness of God." In this book about three hundred ways to achieve this state for humans were discovered. This book is a direct proof of existence of “God”; the segment which religious institutions and their congregations have always needed, but lacked. Any person can compare descriptions from the Catalog to real people, their individual qualities, life algorithms, etc., or use information about how this or that person can be controlled, apply it in practice, see the reactions and get real results from manipulation. “God” created a human in His Image and Likeness, and implanted potential of a Creator into each person. And, gave everyone the freedom to choose exactly how and in what direction to use their existing abilities. The “Divine Will” in respect to a Human was recorded in the “Catalog of Human Souls.” However, humanity lost this Catalog, and began to use “God”-given potential in a completely different way. In the direction opposite of the “Divine Plan,” people began to create artificial images. We feel that the tradition of “True Faith,” which actually is Knowledge, should be revived. Everywhere. Globally. We propose a new ideology of religions and its practical implementation. We propose to finally determine the answer to who is, at least, a Human. And, to move the theory of existence of “God,” the human “Soul” from the status of a theory, which can only be believed in, into the status of a theory that any person can test. New ideology of religions, created on the basis of evidence for “God's” existence produced strictly by scientific methods, can bring people back to “God.”

The text is tailored to the two-year program experience; throughout the text, detail-level adjustments made in language, concepts, and topics have been made to reflect the needs and concerns of the two-year student. Coverage of resources, topics, and research, including work by Robert Sternberg, Carol Dweck, and Martin Seligman, supports concepts. The twelve chapters cover all major student success topics -- adjusting to college; values, goals, and time; learning how you learn; critical, creative, and practical thinking; reading and information literacy; listening and note taking; memory and studying; test taking; diversity and communication; wellness and stress management; managing money; and planning for career success. I should have died quick. But I didn't. I'm a miracle of modern medicine, only the medicine doesn't get much credit, I notice. People say I'm lucky, or I'm blessed, and then they turn away. I'm not the only miracle. There's Odd too. Polly Furnas had The Plan for the future. Get married to Bridger Morgan, for one. College, career, babies. Etc. All the important choices were made. It was all happily-ever-after as a diamond-ring commercial. But The Plan did not include a lethal drug-resistant infection. It did not include "some more reconstruction and scar revision in the future." And it certainly did not include Odd Estes, a trip to Portland in an ancient Cadillac to "tear Bridger a new one," fly fishing, marshmallows, Crisco, or a loaded gun. But plans change. Stories get revised and new choices must be made. Polly and Odd have choices. Surviving or not. Catch or release.

The sprawl of Adventure. The addictiveness of Breakout. The intensity of Space Invaders. Once upon a time, you could only experience this kind of excitement at the arcade. But in 1977 that changed forever. You, and maybe a friend or a sibling, could instantly teleport from your own living room to a dazzling new world—with nothing more than a small plastic cartridge. This was the promise of the Atari 2600—and it was delivered in ways no one ever expected. No, the games it put on your TV weren't what you saw when you plunked in your quarters at the convenience store or in the noisy, smoky business on the other side of town. But they brought the arcade home—and it hasn't left since. With *Adventure: The Atari 2600 at the Dawn of Console Gaming*, Jamie Lendino takes you to the front lines of the home gaming revolution, exploring the history of the world-changing console and delves into the coin-op ports and original titles that still influence gaming today. Before your next trip to a magical universe with your Xbox One, PlayStation 4, or Nintendo Switch, see how the home gaming industry truly began.

You wrote a book. Very nice. But you didn't write to keep it for you. You should publish it. The problem is that the publishers charge high prices for some authors pockets, and do it objectively, due to the high cost of printing. But you allowed that luxury, and now you have a printed book, with you as the author. You can keep hundreds or thousands of volumes in your personal library and give it as a gift to your friends in special occasions, or try to distribute in various libraries. You managed to distribute it, the book is beautifully placed in shelves. In time, dust is spread on covers. After a while, the book is withdrawn. It remains to use it as decoration at home, or support for various household items. But lucky for you, there is an alternative, cheaper and more effective, in selling your book: e-Books! e-Book and online publishing market has evolved rapidly in recent years, and a lot of companies have entered this market, as publishers, online bookstores, or promoting e-books.

The book ecosystem is radically changing, and libraries must change with it. This book tackles the controversial discussion about eBooks and explores librarian-driven solutions and visions for the future of libraries in the 21st century.
