Cross- Cultural Perspectives in Medical Ethics, Second Edition, is an anthology of the latest and best readings on the medical ethics of as many of the major religious, philosophical, and medical traditions that are available today.

This book explores an area of contemporary religion, spirituality and popular culture which has not so far been investigated in depth, the phenomenon of astrology in the modern west. Locating modern astrology historically and sociologically in its religious, New Age and millenarian contexts, Nicholas Campion considers astrology's relation to modernity and draws on extensive fieldwork and interviews with leading modern astrologers to present an invaluable contribution to our understanding of the origins and nature of New Age ideology. This book challenges the notion that astrology is either 'marginal' or a feature of postmodernism. Concluding that astrology is more popular than the usual figures suggest, Campion argues that modern astrology is largely shaped by New Age thought, influenced by the European Millenarian tradition, that it can be seen as an heir to classical Gnosticism and is part of the vernacular religion of the modern west.

The emergence of Islam in the seventh century AD still polarises scholars who seek to separate religious truth from the historical reality with which it is associated. However, history and prophecy are not solely defined by positive evidence or apocalyptic truth, but by human subjects, who consider them to convey distinct messages and in turn make these messages meaningful to others. These messages are mutually interdependent, and analysed together provide new insights into history. It is by way of this concept that Olof Heilo presents the decline of the Eastern Roman Empire as a key to understanding the rise of Islam; two historical processes often perceived as distinct from one another. Eastern Rome and the Rise of Islam highlights significant convergences between Early Islam and the Late Ancient world. It suggests that Islam's rise is a feature of a common process during which tensions between imperial ambitions and apocalyptic beliefs in Europe and the Middle East cut straight across today's theological and political definitions. The conquests of Islam, the emergence of the caliphate, and the transformation of the Roman and Christian world are approached from both prophetic anticipations in the Ancient and Late Ancient world, and from the Medieval and Modern receptions of history. In the shadow of their narratives it becomes possible to trace the outline of a shared history of Christianity and Islam. The "Dark Ages" thus emerge not merely as a tale of sound and fury, but as an era of openness, diversity and unexpected possibilities. Approaching the rise of Islam as a historical phenomenon, this book opens new perspectives in the study of early religion and philosophy, as well as providing a valuable resource for students and scholars of Islamic Studies.

Imperialism and Biblical Prophecy is a radically new interpretation of prophetic poetry. Using more than thirty new translations from the Hebrew Bible, it shows that this poetry is inseparable from imperialism, that each of the three major waves of biblical prophecy which have survived in the Old Testament occurred in response to simultaneous waves of imperialist conquest.

Professional helpers may harm their clients instead of helping them. This is one of the important implications – for the selection, training and practice of members of the helping professions – of the evidence reviewed in this book. Originally published in 1977, Gerald Smale argues that the expectations of the professional helper, whether social worker, doctor, psychiatrist, psychoanalyst, psychotherapist or counsellor, can act as self-fulfilling prophecies on his or her clients, for better or worse. In order to suggest how the expectations of the helper might operate, the author examines a three-stage model of self-fulfilling prophecies. The stages are: the prophecy; behaviour based upon the prophecy; the outcome brought about by the behaviour. Extensive evidence from the fields of experimenter bias, hypnosis and placebo medicine, psychotherapy, casework and counselling research, is reviewed and related to the model, and the relationship between this analysis and labelling theory is discussed. The book demonstrates that it is the behaviour of the worker towards the client which is of crucial

importance, and proposes that the client's future and his or her personal strengths should be an important focus of the helping relationship. Finally, it outlines the dangers of negative expectations, and emphasises the ways in which expectations can be used to optimum effect. The Sibylla Tiburtina is a Latin prophecy attributed to a prophetess from classical antiquity. It concludes with an account of the End of History, involving the coming of Antichrist and his battle with a Last World Emperor. Approximately 100 manuscripts written between the mid-11th and the 16th centuries survive which testify to the Tiburtina's immense popularity in the medieval West; as such it is a key text for understanding medieval apocalypticism and occupies an important place in the intellectual history of the Middle Ages. This book not only re-examines the Tiburtina as a vehicle for expressing contemporary political concerns triggered by crises thought to herald the End of the World, but offers a new approach by placing it, for the first time, in the context of medieval traditions which saw Sibylline prophecy as independent, non-Christian evidence of Christ's life and as confirmation of His divinity. As is shown, these traditions had a major impact on the reception of the Tiburtina. The book concludes with a repertory of the manuscripts, together with brief outlines of individual textual traditions as represented in groups of manuscripts, which will constitute a valuable reference source for other scholars.

MANKIND'S GREATEST DREAM: THE CONQUEST OF DEATH IS FINALLY REALIZED... BUT IT COMES WITH A CATCH. In the near future, medical science discovers the secret to achieving immortality and eternal youth. But in order to preserve everyone's youthful vitality they must undergo an operation before passing into adulthood that locks their body in the form of a pre-adolescent eleven year old. Under the auspices of the United Nations Global Longevity Initiative led by brilliant neurosurgeon Dr. Richard Ross, the program promises a peaceful utopian society where emotionally and intellectually mature juveniles rule the world. But not everyone is happy with the new arrangement. A small but passionate group of rebels from the Garden of Eden church, led by the mercurial Calvin James, plots to overthrow the new regime and return the world to its natural order. Starting with a shocking revelation at the end of the first chapter, the idyllic setting is quickly overturned through a series of sinister schemes and escalating medical complications, where suddenly the world finds itself on the brink of imminent extinction. Building to an exciting climax, Dr. Ross and his endocrinologist girlfriend must save the one remaining adult female queen, whose mature eggs represent the final link to the continuity of the human race. Experts estimate that as many as 98,000 people die in any given year from medical errors that occur in hospitals. That's more than die from motor vehicle accidents, breast cancer, or AIDS--three causes that receive far more public attention. Indeed, more people die annually from medication errors than from workplace injuries. Add the financial cost to the human tragedy, and medical error easily rises to the top ranks of urgent, widespread public problems. To Err Is Human breaks the silence that has surrounded medical errors and their consequence--but not by pointing fingers at caring health care professionals who make honest mistakes. After all, to err is human. Instead, this book sets forth a national agenda--with state and local implications--for reducing medical errors and improving patient safety through the design of a safer health system. This volume reveals the often startling statistics of medical error and the disparity between the incidence of error and public perception of it, given many patients' expectations that the medical profession always performs perfectly. A careful examination is made of how the surrounding forces of legislation, regulation, and market activity influence the quality of care provided by health care organizations and then looks at their handling of medical mistakes. Using a detailed case study, the book reviews the current understanding of why these mistakes happen. A key theme is that legitimate liability concerns

discourage reporting of errors--which begs the question, "How can we learn from our mistakes?" Balancing regulatory versus market-based initiatives and public versus private efforts, the Institute of Medicine presents wide-ranging recommendations for improving patient safety, in the areas of leadership, improved data collection and analysis, and development of effective systems at the level of direct patient care. *To Err Is Human* asserts that the problem is not bad people in health care--it is that good people are working in bad systems that need to be made safer. Comprehensive and straightforward, this book offers a clear prescription for raising the level of patient safety in American health care. It also explains how patients themselves can influence the quality of care that they receive once they check into the hospital. This book will be vitally important to federal, state, and local health policy makers and regulators, health professional licensing officials, hospital administrators, medical educators and students, health caregivers, health journalists, patient advocates--as well as patients themselves. First in a series of publications from the Quality of Health Care in America, a project initiated by the Institute of Medicine

The Persian and Hellenistic periods saw the production and use of a variety of authoritative texts in Israel. 'The Production of Prophecy' brings together a range of influential biblical scholars to examine the construction of prophecy and prophetic books during the Persian period. Drawing on methodological and comparative research and studies of particular biblical texts, the volume explores biblical prophecy as a written phenomenon, examining the prophets of the past, setting this within the general history of Yehud. The relationship between prophetic and other authoritative, written texts is explored, as well as the general social and ideological setting in which the prophetic books emerged.

This book restores the rich tradition of the Sibyls to the position of prominence they once held in the culture and society of the English Renaissance. The sibyls — figures from classical antiquity — played important roles in literature, scholarship and art of the period, exerting a powerful authority due to their centuries-old connection to prophetic declamations of the coming of Christ and the Apocalypse. The identity of the sibyls, however, was not limited to this particular aspect of their fame, but contained a fluid multi-layering of meanings given their prominence in ancient Greek and Roman cultures, as well as the widespread dissemination of prophecies attributed the sibyls that circulated through the oral tradition. Sibylline prophecy of the Middle Ages served as another conduit through which sibylline authority, fame, and familiarity was transmitted and enhanced. Writers as disparate as John Foxe, John Dee, Thomas Churchyard, John Fletcher, Thomas Heywood, Jane Seager, John Lyly, An Collins, William Shakespeare, and many draw upon this shared sibylline tradition to produce particular and specific meanings in their writing. This book explores the many identities, the many faces, of the prophetic sibyls as they appear in the works of English Renaissance writers.

computer failure, obvious alien contact, or direct intervention from God to end the world as we know it. Considering the frequency with which prophecy apparently fails, why do prophecies continue to be made, and what social functions do they serve? This volume gives a concise, but comprehensive, overview of the rich diversity of prophecy, its role in major world religions as well as in new religions and alternative spiritualities, its social dynamics and its impact on individuals' lives. Academic analyses are complimented with contextualized primary source testimonies of those who live and have lived within a prophetic framework. The book argues that the key to understanding the more dramatic, apocalyptic and millenarian aspects of prophecy is in appreciating prophecy's more mundane manifestations and its role in providing meaning and motivation in everyday life.

philosophy of science, *Apocalyptic Narratives* explores how the apocalyptic narrative frames and provides meaning to contemporary, secular and scientific crises focussing on nuclear war, general environmental crisis and climate change in both English- and German-speaking cultural contexts. In particular, the book will use social identity and representation theories, the sociologies of risk and Lakatos' philosophy of science to trace how our cultural background and apocalyptic tradition shape our wider interpretation, communication and response to contemporary global crisis. The set of environmental and other challenges that the world is facing is often framed in terms of apocalyptic or existential crisis. Yet apocalyptic fears about the near future are nothing new. This book looks at the narrative connections between our current sense of crisis and the apocalyptic. The book will be of interest to readers interested in environmental crisis and communication, the sociology and philosophy of science, and existential risk, but also to readers interested in the apocalyptic and its contemporary relevance.

Nearly two thousand years ago a physician named Galen of Pergamon suggested that much of the variation in human behavior could be explained by an individual's temperament. Since that time, inborn dispositions have fallen in and out of favor. Based on fifteen years of research, *Galen's Prophecy* now provides fresh insights into these complex questions, offering startling new evidence to support Galen's ancient classification of melancholic and sanguine adults. Integrating evidence and ideas from biology, philosophy, and psychology, Jerome Kagan examines the implications of the idea of temperament for

aggressive behavior, conscience, psychopathology, and the degree to which each of us can be expected to control our deepest emotions.
