To British television viewers, the name 'Patrick Moore' has been synonymous with Astronomy and Space Travel since he first appeared on The Sky at Night in 1957. To amateur astronomers he has been a source of inspiration, joy, humour and even an eccentric role model since that time. Most people know that his 55 years of presenting The Sky at Night is a world record, but what was he really like in person? What did he do away from the TV cameras, in his observatory, and within the British Astronomical Association, the organisation that inspired him as a youngster? Also, precisely what did he do during the War Years, a subject that has always been shrouded in mystery? Martin Mobberley, a friend of Patrick Moore's for 30 years, and a former President of the British Astronomical Association, has spent ten years exhaustively researching Patrick's real life away from the TV cameras. His childhood, RAF service, tireless voluntary work for astronomy and charity and his endless book writing are all examined in detail. His astronomical observations are also examined in unprecedented detail, along with the battles he fought along the way and his hatred of bureaucracy and political correctness. No fan of Sir Patrick Moore can possibly live without this work on their bookshelf!

This book focuses on diversity, culture, and ethnicity as they relate to psychological assessment of Hispanics. It is a how-to guide for clinicians, researchers, and instructors working with Hispanic clients. Each chapter contains an overview of cultural considerations needed for assessing the Hispanic client followed by a specific exploration of the assessment measures available and the research that has been conducted on these measures with Hispanic participants. An exploration of the strengths and limitations of each assessment measure is included. Considering that ethnocultural minority individuals who are of Hispanic/Latino origin make up the largest ethnocultural minority group in the United States, guidelines for working with this population are a must. Given that a large subset of this percentage is composed of immigrants many of whom do not speak English or who have learned English as a second language, special considerations for effective psychological assessment are necessary. This book fills a gap in the scientific literature by consolidating the research on psychological assessment with Hispanic samples into one comprehensive volume and providing simple recommendations for the psychological assessment of Hispanic clients. An exploration of the general psychological assessment domains (e.g., personality, intelligence) is included with references to research on the major assessment measures used in the field. A more specific exploration of psychodiagnostic assessment measures follows, including the assessment of mood disorders, anxiety disorders, sexual dysfunction, psychosis, etc. Several chapters are dedicated to specialized assessment, including neuropsychological assessment, forensic assessment, and school-based assessment, overall creating the most comprehensive, up-to-date, research-based compendium of psychological assessment measures for use with Hispanic clients.

Special education is now an established part of public education in the United States—by law and by custom. However, it is still widely misunderstood and continues to be dogged by controversies related to such things as categorization, grouping, assessment, placement, funding, instruction, and a variety of legal issues. The purpose of this 13-part, 57-chapter handbook is to help profile and bring greater clarity to this sprawling and growing field. To ensure consistency across the volume, chapter authors review and integrate existing research, identify strengths and weaknesses, note gaps in the literature, and discuss implications for practice and future research. Key features include: Comprehensive Coverage—Fifty-seven chapters cover all aspects of special education in the United States including cultural and international comparisons. Issues & Trends—In addition to synthesizing empirical findings and providing a critical analysis of the status and direction of current research, chapter authors discuss issues related to practice and reflect on trends in thinking. Categorical Chapters—In order to provide a comprehensive and comparative treatment of the twelve categorical chapters in section IV, chapter authors were asked to follow a consistent outline: Definition, Causal Factors, Identification, Behavioral Characteristics, Assessment, Educational Programming, and Trends and Issues. Expertise—Edited by two of the most accomplished scholars in special education, chapter authors include a carefully chosen mixture of established and rising young stars in the field. This book is an appropriate reference volume for anyone (researchers, scholars, graduate students, practitioners, policy makers, and parents) interested in the state of special education today: its research base, current issues and practices, and future trends. It is also appropriate as a textbook for graduate level courses in special education.
