Theres something fascinating about border towns. Who hasnt crossed the line into another state to buy fireworks, gamble, or even to get married? Here are border towns with names as unique as the places themselves, names that bridge the boundaries. Robert D. Temple brings you a quirky, fascinating, and wholly entertaining look at more than eighty North American border towns in *Edge Effects*. With an adventurers heart and a historians keen eye, Temple explores life on the edge and how these places have made their place in history. Theres big-city Mexicali and empty-quarter Idavada, idyllic Vir-Mar Beach and whiskey-soaked Mondak. Then theres prairie-bleak Alsask, mountain-high Wyocolo, and palmy Florala. And who could forget Texarkana? Along with finding these towns in the first place comes adventure in exploring them, by highway, four-wheel-drive, boots, and kayak, and in encountering memorable locals: historians, farmers, waitresses, cops, forest rangers, railroaders, and neer-do-wells. But even more, these places lead us to investigate concepts of borders, boundaries, frontiers, margins, and marginality, as well as survey lines, battle lines, picket lines, and color lines. *Edge Effects* brilliantly examines how frontiers enrich cultures and boundaries define them. But more importantly, it reveals how edges shape local history and our lives. A revised edition of *Edge Effects* was published July 10, 2009.

Anatolia was home to a large number of polities in the

medieval period. Given its location at the geographical and chronological juncture between Byzantines and the Ottomans, its story tends to be read through the Seljuk experience. This obscures the multiple experiences and spaces of Anatolia under the Byzantine empire, Turko-Muslim dynasties contemporary to the Seljuks, the Mongol Ilkhanids, and the various beyliks of eastern and western Anatolia. This book looks beyond political structures and towards a reconsideration of the interactions between the rural and the urban; an analysis of the relationships between architecture, culture and power; and an examination of the region's multiple geographies. In order to expand historiographical perspectives it draws on a wide variety of sources (architectural, artistic, documentary and literary), including texts composed in several languages (Arabic, Armenian, Byzantine Greek, Persian and Turkish). Original in its coverage of this period from the perspective of multiple polities, religions and languages, this volume is also the first to truly embrace the cultural complexity that was inherent in the reality of daily life in medieval Anatolia and surrounding regions.

This book is dedicated to Aristid Lindenmayer on the occasion of his 60th birthday on November 17, 1985. Contributions range from mathematics and theoretical computer science to biology. Aristid Lindenmayer introduced

language-theoretic models for developmental biology in 1968. Since then the models have been customarily referred to as L systems. Lindenmayer's invention turned out to be one of the most beautiful examples of interdisciplinary science: work in one area (developmental biology) induces most fruitful ideas in other areas (theory of formal languages and automata, and formal power series). As evident from the articles and references in this book, the interest in L systems is continuously growing. For newcomers the first contact with L systems usually happens via the most basic class of L systems, namely, DOL systems. Here "0" stands for zero context between developing cells. It has been a major typographical problem that printers are unable to distinguish between 0 (zero) and 0 (oh). Thus, DOL was almost always printed with "oh" rather than "zero", and also pronounced that way. However, this misunderstanding turned out to be very fortunate. The wrong spelling "DOL" of "DOL" could be read in the suggestive way: DO L Indeed, hundreds of researchers have followed this suggestion. Some of them appear as contributors to this book. Of the many who could not contribute, we in particular regret the absence of A. Ehrenfeucht, G. Herman and H.A. Maurer whose influence in the theory of L systems has been most significant.

CAFO : The Tragedy of Industrial Animal Factories provides an unprecedented view of concentrated animal feeding operations, where increasing amounts of the world's meat, milk, eggs, and seafood are produced. As the photos and essays in this powerful book demonstrate, the rise of the CAFO industry around the world has become one of the most pressing issues of our time. Industrial livestock production is now a leading source of climate-changing emissions, a source of both freshwater and ocean pollution, and a significant contributor to diet-related diseases such as obesity and the spread of food-borne illnesses. The intensive concentration of animals in such cramped and filthy conditions dependent on antibiotic medicines and steady streams of subsidized industrial feeds poses serious moral and ethical concerns for all of us.

The discovery of the pulmonary transit of blood was a groundbreaking discovery in the history of the life sciences, and a prerequisite for William Harvey's fully developed theory of blood circulation three centuries later. This book is the first attempt at understanding Ibn al-Naf's anatomical discovery from within the medical and theological works of this thirteenth century physician-jurist, and his broader social, religious and intellectual contexts. Although Ibn al-Naf's did not posit a theory of blood circulation, he nevertheless challenged the reigning Galenic and Avicennian physiological theories, and the then prevailing anatomical understandings of the heart. Far from being a happy guess, Ibn al-Naf's anatomical result is rooted in an extensive re-evaluation of the reigning medical theories. Moreover, this book shows that Ibn al-Naf's re-evaluation is itself a result of his engagement with post-Avicennian debates on the relationship between reason and revelation, and the rationality of traditionalist beliefs, such as bodily resurrection. Breaking new ground by showing how medicine, philosophy and theology were intertwined in the intellectual fabric of pre-modern Islamic societies, *Science and Religion in Mamluk Egypt* will be of interest to students and scholars of the History of Science, the History of Medicine and Islamic Studies.

According to this bestselling author, diabetes is not a disease; in the vast majority of cases, it is a complex mechanism of protection or survival that the body chooses to avoid the possibly fatal consequences of an unhealthy diet and lifestyle. Despite the body's ceaseless self-preservation efforts (which we call diseases), millions of people suffer or die unnecessarily from such consequences. The imbalanced blood sugar level in diabetes is but a symptom of illness, not the illness itself. By developing diabetes, the body is neither doing something wrong nor is it trying to commit suicide. The

current diabetes epidemic is man-made, or rather, factory-made, and, therefore, can be halted and reversed through simple but effective changes in diet and lifestyle. Diabetes - No More provides you with essential information on the various causes of diabetes and how anyone can avoid them. To stop the diabetes epidemic we need to create the right circumstances that allows the body to heal. Just as there is a mechanism to become diabetic, there is also a mechanism to reverse it. Find out how!

This book is a study of Islamic architecture in Anatolia following the Mongol conquest in 1243. Complex shifts in rule, movements of population, and cultural transformations took place that affected architecture on multiple levels. Beginning with the Mongol conquest of Anatolia, and ending with the demise of the Ilkhanid Empire, centered in Iran, in the 1330s, this book considers how the integration of Anatolia into the Mongol world system transformed architecture and patronage in the region. Traditionally, this period has been studied within the larger narrative of a progression from Seljuk to Ottoman rule and architecture, in a historiography that privileges Turkish national identity. Once Anatolia is studied within the framework of the Mongol Empire, however, the region no longer appears as an isolated case; rather it is integrated into a broader context beyond the modern borders of Turkey, Iran, and the Caucasus republics. The monuments built during this period served a number of purposes: mosques were places of prayer and congregation, madrasas were used to teach Islamic law and theology, and caravanserais secured trade routes for merchants and travelers. This study analyzes architecture on multiple, overlapping levels, based on a detailed observation of the monuments. The layers of information extracted from the monuments themselves, from written sources in Arabic, Persian, and Turkish, and from historical photographs, shape an image of Islamic

architecture in medieval Anatolia that reflects the complexities of this frontier region. New patrons emerged, craftsmen migrated between neighboring regions, and the use of locally available materials fostered the transformation of designs in ways that are closely tied to specific places. Starting from these sources, this book untangles the intertwined narratives of architecture, history, and religion to provide a broader understanding of frontier culture in the medieval Middle East, with its complex interaction of local, regional, and trans-regional identities.

One of the most powerful dynasties to rule in the medieval Middle East, the Seljuks played a critical role in the development of Anatolia's multi-ethnic, multi-confessional identity. Under Seljuk rule (c. 1081-1308) the formerly Christian Byzantine territories of Anatolia were transformed by the development of Muslim culture, society and politics, and it was then – well before the arrival of the Ottomans – that a Turkish population became firmly established in these lands. But these developments are little understood, and the Seljuk dynasty remains little studied. Yet the Seljuks of Anatolia were one of the most influential dynasties of the thirteenth-century Middle East, controlling some of the major trade routes of the period, playing a crucial role in linking East and West of the medieval world. Here, Andrew Peacock and Sara Nur Yildiz explore the history of Anatolia under Seljuk rule in the twelfth and thirteenth centuries, examining

developments in culture, politics, religion and society and shedding new light on the influence of the dynasty within Anatolia and throughout Western Asia. The Seljuks of Anatolia examines the crucial aspect of the Seljuk dynastic identity, and how this related to their royal households, and to the material and literary arts they sought to influence and promote through patronage. It also demonstrates how the Seljuks played a critical role in the development of Islamic culture in Anatolia, with strong influences from Iran, Syria and further afield. By taking this critical role into account, this book offers an analysis of the religious transformations that occurred during this period, from the Byzantine and Christian identities that prevailed amongst the Seljuks to the Sufis that held key positions in the Seljuk court. With its lively discussion of Seljuk identity, politics and culture, The Seljuks of Anatolia will be of great interest to researchers with interests in Byzantium as well as the material culture and society of the medieval Islamic world.
