Microsoft Azure Essentials from Microsoft Press is a series of free ebooks designed to help you advance your technical skills with Microsoft Azure. This third ebook in the series introduces Microsoft Azure Machine Learning, a service that a developer can use to build predictive analytics models (using training datasets from a variety of data sources) and then

easily deploy those models for consumption as cloud web services. The ebook presents an overview of modern data science theory and principles, the associated workflow, and then covers some of the more common machine learning algorithms in use today. It builds a variety of predictive analytics models using real world data, evaluates several different machine learning algorithms and modeling strategies, and then deploys the finished models as machine learning web services on Azure within a matter of minutes. The ebook also expands on a working Azure Machine Learning predictive model example to explore the types of client and server applications you can create to consume Azure Machine Learning web services. Watch Microsoft Press's blog and Twitter (@MicrosoftPress) to learn about other free ebooks in the Microsoft Azure Essentials series.

These are the proceedings of Eurocrypt 2010, the 29th in the series of European conferences on the Theory and Application of Cryptographic Techniques. The conference was sponsored by the International Association for Cryptologic Research and held on the French Riviera, May 30–June 3, 2010. A total of 191 papers were received of which 188 were retained as valid submissions. These were each assigned to at least three Program Committee members and a total of 606 review reports were produced. The printed record of the reviews and extensive online discussions that followed would be almost as voluminous as these proceedings. In the end 35 submissions were accepted with two submission pairs being merged to give 33 papers presented at the conference. The final papers in these proceedings were not subject to a second review before publication and the authors are responsible for their contents. The Program Committee, listed on the next page, deserves particular thanks for all their hard work, their outstanding expertise, and their constant commitment to all aspects of the evaluation process. These thanks are of course extended to the very many external reviewers who took the time to help out during the evaluation process. It was also a great pleasure to honor and welcome Moti Yung who gave the 2010 IACR Distinguished Lecture.

Statistics are just as vital to understanding political science as the study of institutions, but getting students to understand them when teaching a methods course can be a big challenge. Statistics for Political Analysis makes understanding the numbers easy. The only introduction to statistics book written specifically for political science undergraduates, this book explains each statistical concept in plain language—from basic univariate statistics and the basic measures of association to bivariate and multivariate regression—and uses real world political examples. Students learn the relevance of statistics to political science, how to understand and calculate statistics mathematically, and how to obtain them using SPSS. All calculations are modeled step-by-step, giving students needed practice to master the process without making it intimidating. Each chapter concludes with exercises that get students actively applying the steps and building their professional skills through data calculation, analysis, and memo writing.

In 2001 AFIHM and the British HCI Group combined their annual conferences, bringing together the best features of each organisation's separate conference series, and providing a special opportunity for the French- and English-speaking HCI communities to interact. This volume contains the full papers presented at IHM-HCI 2001, the 15th annual conference of the British HCI group, a specialist group of the British Computer Society and the 14th annual conference of the Association Francophone d'interaction Homme-Machine, an independent association for any French-speaking person who is interested in Human-Computer Interaction. Human-Computer Interaction is a discipline well-suited to such a multi-linguistic and multi-cultural conference since it brings together researchers and practitioners from a variety of disciplines with very different ways of thinking and working. As a community we are already used to tackling the challenges of working across such boundaries, dealing with the problems and taking advantage of the richness of the resulting insights: interaction without frontiers. The papers presented in this volume cover all the main areas of HCI research, but also focus on considering the challenges of new applications

Education in South Asia and the Indian Ocean Islands is a critical reference guide to development of education in Bangladesh, Bhutan, India, Nepal, Sri Lanka, Comoros Islands, Maldives, Mauritius, Seychelles and Zanzibar. The chapters provide an overview of the education system in each country, focusing particularly on contemporary education policies and some of the problems countries in this region face during the processes of development. Key themes include the practice of implementation of educational policy and the impact of global and local educational decisions on societies. Due to the demographic scale and the cultural diversity of India, the volume contains a particularly extensive coverage of the distinctive educational issues in this country. Including a comparative introduction to the issues facing education in the region as a whole, this book is an essential reference for researchers, scholars, international agencies and policy-makers.

Do the antitrust laws have a place in the digital economy or are they obsolete? That is the question raised by the government's legal action against Microsoft, and it is the question this volume is designed to answer. America's antitrust laws were born out of the Industrial Revolution. Opponents of the antitrust laws argue that whatever merit the antitrust laws may have had in the past they have no place in a digital economy. Rapid innovation makes the accumulation of market power practically impossible. Markets change too quickly for antitrust actions

to keep up. And antitrust remedies are inevitably regulatory and hence threaten to 'regulate business'. A different view - and, generally, the view presented in this volume - is that antitrust law can and does have an important and constructive role to play in the digital economy. The software business is new, it is complex, and it is rapidly moving. Analysis of market definition, contestability and potential competition, the role of innovation, network externalities, cost structures and marketing channels present challenges for academics, policymakers and judges alike. Evaluating consumer harm is problematic. Distinguishing between illegal conduct and brutal - but legitimate - competition is often difficult. Is antitrust analysis up to the challenge? This volume suggests that antitrust analysis 'still works'. In stark contrast to the political rhetoric that has surrounded much of the debate over the Microsoft case, the articles presented here suggest neither that Microsoft is inherently bad, nor that it deserves a de facto exemption from the antitrust laws. Instead, they offer insights - for policymakers, courts, practitioners, professors and students of antitrust policy everywhere - on how antitrust analysis can be applied to the business of making and marketing computer software.
