Using an experimental approach, Maximilian Eberl evaluates the role of implicit learning (CBM/AAT) for the modification of organizational routines. Taking a vertical perspective on the (collective) entities in organizations shows an increasing role of impulsive processes the lower the level gets. The horizontal perspective demonstrates the potential of implicit learning for the replication of routines. Finally, the time perspective highlights the contributions of implicit learning strategies for change in and of routines, as well as the contributions of implicit learning to deal with the path-dependence of routines.

Entries cover the concepts of group processes and intergroup relations, ranging from conformity to diversity and from small group interaction to intergroup relations on a global scale.

Religion and science have often been at odds. In particular, Christianity and psychology have not always gotten along. Some Christians are still suspicious of psychological findings. But researcher Everett Worthington argues that Christians can know people better--and even know God better--through psychological science. Worthington suggests that the relationship between psychological science and Christianity is less like a war or mere dialogue and more like an emerging marriage. In this relational model of psychology and Christianity, there may be marital spats at times but also great

potential for an intimate, mutually fulfilling relationship. Worthington demonstrates how the tools of experimental psychology shed light on human nature and the nature of God. Because people bear the image of God, the findings of psychological science help us understand both people and God more clearly. Psychological science provides new perspectives on theology and can help us address theological controversies and hot topics. Worthington gives recent examples of illuminating psychological findings, examines the distortions of the image of God through the effects of sin and points to ways that psychology assists Christians in living more virtuously. Psychology can contribute to the Christian life, because all of us, psychologists and non-psychologists alike, are human and can benefit from better understanding our fellow humankind. Beyond integrating Christian and psychological truths, this book uncovers new relationships between science and religion, demonstrates psychology's benefits to theology, and helps Christians live a redeemed life that is pleasing to God.

In *Foundations of Ethical Practice, Research, and Teaching in Psychology and Counseling*, Kitchener and Anderson lay a conceptual foundation for thinking well about ethical problems. Whereas the first edition focused mainly on ethical reasoning and decision making, this new edition draws more explicitly on all components of James Rest's model of moral/ethical behavior, including moral/ethical sensitivity, moral/ethical decision making, moral/ethical motivation, and the ego strength to follow through on the decision. The book addresses five key principles of ethical decision making and includes updated sections on research, teaching and supervision, and practice. It discusses the relationship of the ethical principles and the model of ethical decision-making to professional ethical codes, while offering discussion questions, case scenarios, and activities to help the reader focus on ethical character and virtue. *Foundations of Ethical Practice, Research, and Teaching in Psychology and Counseling* gives psychologists, students, and trainees the tools they need to analyze their own ethical quandaries and take the right action.

Like its predecessors, Volume III of the Handbook for Teaching Introductory Psychology provides introductory psychology instructors with teaching ideas and activities that can immediately be put into practice in the classroom. It contains an organized collection of articles from Teaching of Psychology (TOP), the official journal of the Society for the Teaching of Psychology, Division 2 of the American Psychological Association. Volume III contains 89 articles from TOP that have not been included in other volumes. Another distinction between this volume and its predecessors is its emphasis on testing and assessment. The book is divided into two sections. Section One, "Issues and Approaches in Teaching Introductory Psychology," contains 52 articles on critical issues, such as: how to approach the course; understanding students' interests, perceptions, and motives; students' existing knowledge of psychology (including their misconceptions); a comparison of introductory textbooks and tips on how to evaluate them; test questions and student factors affecting exam performance; an overview of different forms of feedback; giving extra credit; and how to deal with academic dishonesty. Section Two consists of 37 articles that present demonstrations, class and laboratory projects, and other techniques to enhance teaching and learning in both the introductory, as well as advanced courses in the discipline. This section is organized so as to parallel the order of topics found in most introductory psychology textbooks. Intended for academicians who teach the introductory psychology course and/or oversee grad assistants who teach the course, all royalties of the book go directly to the Society for the Teaching of Psychology to promote its activities to further improve the teaching of psychology.

The chapters in this volume are the edited versions of invited addresses to the XXVI International Congress of Psychology held in Montréal in August 1996. As one major goal of the Congress was to promote communication among specializations in scientific psychology, the speakers were asked to survey their research area and present their own work in a way that would be accessible to their colleagues in other areas. Another purpose of the meeting was to bring researchers together from different parts of the

world, reflecting their different approaches to the scientific study of mind, brain, and behavior. Consequently, the eminent researchers who have written the twenty-six chapters included in the present volume were drawn from universities and research institutes in North America, Europe, Japan, Russia, Israel, and New Zealand. The chapters cover a range of topics in human and animal experimental psychology. The first section deals with psychobiological processes - the interplay of body and mind in determining intelligence, stress, and pain. The next five chapters address current issues in neuropsychology and neuroscience, including the neural correlates of attention and vision. A third section looks at learning processes in humans and animals, and a fourth deals with a range of topics in perception and cognition. The final five chapters take a developmental perspective, presenting theoretical and empirical analyses of the acquisition of perceptual and cognitive abilities. Overall, the collection illustrates the growing trend to break down traditional barriers between areas of experimental psychology; there are many instances of profitable interactions between researchers studying aspects of behavior and those studying the biological bases of these behaviors. The twenty-six chapters give an excellent overview of current research in scientific psychology.

This volume describes new frontiers in medical and service robotics in the light of recent developments in technology to advance robot design and implementation. In particular, the work looks at advances in design, development and implementation of contemporary surgical, rehabilitation and biorobots. Surgical robots allow surgeons greater access to areas under operation using more precise and less invasive methods. Rehabilitation robots facilitate and support the lives of the infirm, elderly people, or those with dysfunction of body parts affecting movement. These robots are also used

for rehabilitation and related procedures, such as training and therapy. Biorobots are designed to imitate the cognition of humans and animals. The need to substitute humans working on delicate, tiresome and monotonous tasks, or working with potentially health-damaging toxic materials, requires intelligent, high-performance service robots with the ability to cooperate, advanced communication and sophisticated perception and cognitive capabilities. Progress in this field is fast and results need to be disseminated to stimulate both practical applications and further research. Thus, these papers are a valuable addition to existing literature.

This detailed study guide helps students to understand and retain the material in 'Exploring Psychology', ninth edition, by David Myers. Each chapter includes practice tests and exercises, key concept reviews, section reviews and guided study questions. This ninth modular edition of David G. Myers' 'Psychology' includes expanded coverage of the most recent developments in the dynamic fields of cognitive science, neuroscience, cultural and gender diversity, and industrial/organisational psychology. How are Christians to understand and undertake the discipline of psychology? This question has been of keen interest (and sometimes concern) to Christians because of the importance we place on a correct understanding of human nature. Psychology can sometimes seem disconnected from, if not antithetical to, Christian perspectives on life. How are we to understand our Christian beliefs about persons in relation to secular psychological beliefs? This revised edition of a widely appreciated text now presents five models for understanding the relationship between psychology and Christianity. All the essays and responses have been reworked and updated with some new contributors including the addition of a new perspective, the transformative view from John Coe and Todd Hall (Biola University). Also found here is David Powlison (Westminster Theological Seminary) who offers the biblical counseling model. The

levels-of-explanation model is advanced by David G. Myers (Hope College), while Stanton L. Jones (Wheaton College) offers an entirely new chapter presenting the integration model. The Christian psychology model is put forth by Robert C. Roberts (Baylor University) now joined by Paul J. Watson (University of Tennessee, Chattanooga). Each of the contributors responds to the other essayists, noting points of agreement as well as problems they see. Eric L. Johnson provides a revised introduction that describes the history of Christians and psychology, as well as a conclusion that considers what might unite the five views and how a reader might evaluate the relative strengths and weaknesses of each view. *Psychology and Christianity: Five Views* has become a standard introductory textbook for students and professors of Christian psychology. This revision promises to keep it so.

"This is a book I (David) secretly wanted to write. I have long believed that what is wrong with all psychology textbooks (including those I have written) is their overlong chapters. Few can read a 40-page chapter in a single sitting without their eyes glazing and their mind wandering. So why not organize the discipline into digestible chunks-say forty 15-page chapters rather than fifteen 40-page chapters-that a student could read in a sitting, with a sense of completion? Thus, when McGraw-Hill psychology editor Chris Rogers first suggested that I abbreviate and restructure my 15-chapter, 600-page Social Psychology into a series of crisply written 10-page modules, I said "Eureka!" At last a publisher willing to break convention by packaging the material in a form ideally suited to students' attention spans. By presenting concepts and findings in smaller bites, we also hoped not to overload students' capacities to absorb new information. And, by keeping Exploring Social Psychology slim, we sought to enable instructors

to supplement it with other reading"--

This innovative textbook is the first to integrate learning and memory, behaviour, and cognition. It focuses on fascinating human research in both memory and learning (while also bringing in important animal studies) and brings the reader up to date with the latest developments in the subject. Students are encouraged to think critically: key theories and issues are looked at in detail; descriptions of experiments include why they were done and how examining the method can help evaluate competing viewpoints. By looking at underlying cognitive processes, students come away with a sense of learning and memory being interrelated actions taken by the same human being, rather than two separate activities. Lively and engaging writing is supported by lots of examples of practical applications that show the relevance of lab-based research to everyday life. Examples include treatments for phobias and autism, ways to improve eyewitness testimony, and methods of enhancing study techniques.
