They already know everything that's in here. If the real people of America, the silent majority, are going to survive, they must educate themselves. That is the purpose of this book." In what the author considers a survival guide, there is explicit information on the uses and effects of drugs, ranging from pot to heroin to peanuts. There i detailed advice concerning electronics, sabotage, and surveillance, with data on everything from bugs to scramblers. Antisocial behaviour and conduct disorders are the most common reason for referral to child and adolescent mental health services and have a significant impact on the quality of life of children and young people and their parents and carers. Rates of other mental health problems (including antisocial personality disorder) are considerably increased for adults who had a conduct disorder in childhood. This new NICE guideline seeks to address these problems by offering advice on prevention strategies and a range of psychosocial interventions. It reviews the evidence across the care pathway, encompassing access to and delivery of services, experience of care, selective prevention interventions, case identification and assessment, psychological and psychosocial indicated prevention and treatment interventions, and pharmacological and physical interventions. Readership: Intended for healthcare professionals in CAMHS, but this will also be useful to professionals in primary care (as there is much emphasis on recognition).

How are users influenced by social media platforms when they generate content, and does this influence affect users' compliance with copyright laws? These are pressing questions in today's internet age, and *Regulating Content on Social Media* answers them by analysing how the behaviours of social media users are regulated from a copyright perspective. Corinne Tan, an internet governance specialist, compares copyright laws on selected social media platforms, namely Facebook, Pinterest, YouTube, Twitter and Wikipedia, with other regulatory factors such as the terms of service and the technological features of each platform. This comparison enables her to explore how each platform affects the role copyright laws play in securing compliance from their users. Through a case study detailing the content generative activities undertaken by a hypothetical user named Jane Doe, as well as drawing from empirical studies, the book argues that – in spite of copyright's purported regulation of certain behaviours – users are 'nudged' by the social media platforms themselves to behave in ways that may be inconsistent with copyright laws. Praise for *Regulating Content on Social Media* 'This book makes an important contribution to the field of social media and copyright. It tackles the real issue of how social media is designed to encourage users to engage in generative practices, in a sense effectively "seducing" users into practices that involve misuse or infringement of copyright, whilst simultaneously normalising such practices.' Melissa de Zwart, Dean of Law, Adelaide Law School, Australia "This timely and accessible book examines the regulation of content generative activities across five popular social media platforms – Facebook, Pinterest, YouTube, Twitter and Wikipedia. Its in-depth, critical and comparative analysis of the platforms' growing efforts to align terms of service and technological features with copyright law should be of great interest to anyone studying the interplay of law and new media." Peter K. Yu, Director of the Center for Law and Intellectual Property, Texas A&M University
