This book is an attempt to trace the majestic immense journey from the coming into being of the universe to the emergence and evolution of life. It is intended to complement the many excellent books that cover different aspects of this journey. The contents have been classified into five parts. Part I covers the coming into existence of the universe while Part II presents the beginning of life on the early Earth, following which Part III discusses the emergence of consciousness and intelligence, and Part IV, the immense journey of the universe beyond Earth. Finally, Part V addresses the problems raised by the rise of higher-order consciousness in human beings as captured by the phrase "the human condition." Contents: Introduction The Coming into Existence of the Universe: In the Beginning Quantum Foundations and the Building Blocks of Matter Let There be Light The Beginning of Life on the Early Earth: Prebiotic Molecules and Protocells The First Cells Darwinian Evolution and Beyond The Emergence of Consciousness: Sense, Thought and Consciousness The Immense Journey of the Universe: Beyond Our Earth The Human Condition: Civilization and Its Discontents Code and Implications Appendices: Space — Time — Matter Group Theory and Quantum Mechanics Readership: Students in natural sciences and all those interested in philosophy of science. In this volume (#90) the 2011 edition of the Dutchess County Historical Society Yearbook, there are two focuses. One is on places such as Innisfree Garden, Blithewood, Peach Hill Park, plus Golfing, Fox Hunting and Pheasantry in Dutchess County and the other focus is about forgotten famous Dutchess County residents such as Isaac Mitchell, Charles Warner, William Woodworth and Henry Beekman. These 12 stories tell in vivid detail the outdoor heritage of Dutchess County

Following seven years of consultations, the governing bodies of the Rules of golf will implement the most comprehensive Rules changes seen in the game for 37 years. In a bid to make the Rules more accessible and straightforward The R&A and USGA have reworded every Rule and made alterations which will affect the way every golfer in the world plays the game - that's some 60 million people. The Rules will be reduced from 34 to 24 and some of the changes will create ripples throughout the world of sport. They include: Reduction of "ball moved" penalties. Relaxed putting green rules. Relaxed bunker rules. A bigger reliance on a player's "reasonable judgment". Reduced search times. The abandonment of the "furthest from the hole plays first" etiquette in favour of "ready golf". Relaxed procedure for dropping the ball. The Official Guidebook to the Rules of Golf will be the only complete official guide to all the Rules and their interpretations. It includes guidelines for committees and modified Rules for players with disabilities. This is the book that every serious golfer will need.

Integral Calculus lies at the heart of most technical and scientific subjects. This book can be used to teach integration as a course text, a revision or remedial guide, or as a self-teaching work. The author has designed the book to be a flexible learning tool, suitable for A-Level students as well as other students in higher and further education whose courses include a substantial maths component (e.g. BTEC or GNVQ science and engineering courses). Verity Carr has accumulated nearly thirty years of experience teaching mathematics at all levels and has a rare gift for making mathematics simple and enjoyable. At Brooklands College, she has taken a leading role in the development of a highly successful Mathematics Workshop. This series of Made Simple Maths books widens her audience but continues to provide the kind of straightforward and logical approach she has developed over her years of teaching.

The many-body-theoretical basis and applications of theoretical spectroscopy of condensed matter, e.g. crystals, nanosystems, and molecules are unified in one advanced text for readers from graduate students to active researchers in the field. The theory is developed from first principles including fully the electron-electron interaction and spin interactions. It is based on the many-body perturbation theory, a quantum-field-theoretical description, and Green's functions. The important expressions for ground states as well as electronic single-particle and pair excitations are explained. Based on single-particle and two-particle Green's functions, the Dyson and Bethe-Salpeter equations are derived. They are applied to calculate spectral and response functions. Important spectra are those which can be measured using photoemission/inverse photoemission, optical spectroscopy, and electron energy loss/inelastic X-ray spectroscopy. Important approximations are derived and discussed in the light of selected computational and experimental results. Some numerical implementations available in well-known computer codes are critically discussed. The book is divided into four parts: (i) In the first part the many-electron systems are described in the framework of the quantum-field theory. The electron spin and the spin-orbit interaction are taken into account. Sum rules are derived. (ii) The second part is mainly related to the ground state of electronic systems. The total energy is treated within the density functional theory. The most important approximations for exchange and correlation are detailed. (iii) The third part is essentially devoted to the description of charged electronic excitations such as electrons and holes. Central approximations as Hedin's GW and the T-matrix approximation are discussed. (iv) The fourth part is focused on response functions measured in optical and loss spectroscopies and neutral pair or collective excitations.

Fascination with quotidian experience in modern art, literature, and philosophy promotes ecstatic forms of reflection on the very structure of the everyday world. Gosetti-Ferencei examines the ways in which modern art and literature enable a study of how we experience quotidian life. She shows that modernism, while exhibiting many strands of development, can be understood by investigating how its attentions to perception and expectation, to the common quality of things, or to childhood play gives way to experiences of ecstasis—the stepping outside of the ordinary familiarity of the world. While phenomenology grounds this study (through Husserl, Heidegger, Merleau-Ponty, and Bachelard), what makes this book more than a treatise on phenomenological aesthetics is the way in which modernity itself is examined in its relation to the quotidian. Through the works of artists and writers such as Benjamin, Cézanne, Frost, Klee, Newman, Pollock, Ponge, Proust, Rilke, Robbe-Grillet, Rothko, Sartre, and Twombly, the world of quotidian life can be seen to harbor a latent ecstasis. The breakdown of the quotidian through and after modernism then becomes an urgent question for understanding art and literature in its capacity to further human experience, and it points to the limits of phenomenological explications of the everyday.

Living in crumbling Brooklyn apartments, holding down jobs as actors and writers and eschewing the middle-class sensibilities of their parents, graduates of the prestigious Oberlin College, Lil, Beth, Sadie, Emily, Dave and Tal believe they can have it all. When the group come together to celebrate a marriage, anything seems possible. But soon the reality of rent, marriage and family will test them all. For this fortunate age can't last for ever, and the group must face adulthood, whether they are ready for it or not. Sprawling and richly drawn, *A Fortunate Age* traces the lives of the group during some of the most defining years of modern America – from the decadence of the dot com boom through to the sobering events of September 11 and the trailing years that followed – this brilliant, ambitious debut novel perfectly captures the hopes, anxieties and dreams of a generation.

Bruce Jenner captured America's attention by shattering world records in the Decathlon at the 1976 Summer Olympics. Launched onto the world stage, Jenner was young, photogenic, All-American. He humbly accepted the adulation of a nation, and has stayed a household name ever since, even more so in recent years as the patriarch of one of America's most famous—and infamous—families, the Kardashian / Jenner clan. Almost forty years later, the press has been covering Jenner's transition from male to female, and should he come out publicly, it would make him the highest-profile person ever to come out as transgender. Living life proudly and openly, Jenner would serve as a role model for much of the transgender community. But not for all. His path has been controversial, as some advocates see the celebrity glare given off by his connection to the Kardashian family as exploitative, and his public persona making him a less-than-ideal spokesperson for transgendered people. Bruce Jenner, who seemingly always being watched by crowds, now finds himself more scrutinized than ever.

Based on her work with over a thousand women across the country, psychologist Helene G. Brenner has learned that women feel the impulse to accommodate, adapt and mold themselves to serve others at their own expense. Her solution is an invigorating new approach to women's psychology. The key to transformation, she explains, is not self-improvement, but self-acceptance—affirming and validating what we truly feel and experience and who we already are. Dr. Brenner shows women how to discover and express what they truly want and value, guiding you toward your own Inner Voice. *I Know I'm In There Somewhere* will show you: - How to embrace, rather than fix, the Inner Voice that has been there all along - How to distinguish the Outer Voices (the expectations of the people around you) from Your Inner Voice (the voice of your true self that goes beyond intuition and guides you wisely towards what is right for you) - What to do when you feel that the essence of who you are is being stifled by external demands and expectations

This monograph initially offers a systematic treatment of the theory and methodology of alternative notions of income polarization and related issues. It then goes on to analyze social polarization, ordinal polarization, and the relations between inequality polarization, fractionalization and likelihood of conflicts. Axiomatic approaches to the measurement of polarization from different perspectives are analyzed rigorously. In order to understand the difference between inequality and polarization, a discussion on income inequality is also included.

The Pulitzer Prize-winning historian talks with some of twentieth century's most iconic musicians—"Riveting . . . Just about every interview has a revelation" (San Francisco Chronicle). Through the second half of the twentieth century, Studs Terkel hosted the legendary radio show "The Wax Museum," presenting Chicago's music fans with his inimitable take on music of all kinds, from classical, opera, and jazz to gospel, blues, folk, and rock. Featuring more than forty of Terkel's conversations with some of the greatest musicians of the past century, *And They All Sang* is "a tribute to music's universality and power" (Philadelphia Inquirer). Included here are fascinating conversations with Louis Armstrong, Leonard Bernstein, Big Bill Broonzy, Bob Dylan, Dizzy Gillespie, Mahalia Jackson, Janis Joplin, Rosa Raisa, Pete Seeger, and many others. As the esteemed music critic Anthony DeCurtis wrote in the Chicago Tribune, "the terms 'interview' or 'oral history' don't begin to do justice to what Terkel achieves in these conversations, which are at once wildly ambitious and as casual as can be." Whether discussing Enrico Caruso's nervousness on stage with opera diva Edith Mason or the Beatles' 1966 encounter in London with revered Indian sitar player Ravi Shankar, "Terkel's singular gift for bringing his subjects to life in their own words should strike a chord with any music fan old enough to have replaced a worn-out record needle" (The New York Times). "Whether diva or dustbowl balladeer, Studs treats them all alike, with deep knowledge and an intimate, conversational approach . . . as this often remarkable book shows, Studs Terkel has remained mesmerized by great music throughout his life." —The Guardian "[Terkel's] expertise is evident on every page, whether debating the harmonic structure of the spirituals or discerning the subtleties of Keith Jarrett's piano technique . . . As ever, he is the most skillful of interviewers." —The Independent "What makes *And They All Sang* a rousing success isn't just Terkel's phenomenal range and broad knowledge, it's his passionate love of the music and his deep humanity." —San Francisco Chronicle

This volume contains papers that are related to academic peace studies and to the politics of peace. This is an ideal introduction for all embarking on a degree in Politics or International Relations. Starting from the premise that the 'doing' of political science is an active, and interactive, process of critical evaluation, it addresses the crucial question of how – as well as what – we should study. The book examines a wide range of theoretical perspectives and shows how they can be usefully applied to questions such as 'Why do states go to war?' and 'In whose interests does the political system work?' Chapters are organized by core areas of study – such as power, the state, policy, institutions, the media, security, political economy – and show how theories can be used and applied within each topic. Key benefits: - shows how to apply and critique theories with confidence - provides the complete analytical toolkit needed to study Politics and International Relations - incorporates case studies and examples from around the world

With his fellow artists Philippe Parreno, Dominique Gonzalez-Foerster, and Bernard Joisten, Pierre Joseph contributes to the redefinition of the aesthetic of art since the 1990s. He is the author of groundbreaking exhibitions and works – created on his own or in collaboration – such as the Paradise Workshops, 1990, the pop culture Characters to be reactivated series, 1991–1997, or the collaborative projects of the 2000s that made him a seminal figure for the new generation of French artists. His approach successively deals with issues such as the permanence of things and the digital manipulation of reality, questions of knowledge and transmission, of how to produce forms, and how they evolve. Introduced by a retrospective essay by French art critic and curator Stéphanie Moisdon, this book is a selective overview of the artist's production, accompanied by a conversation with British artist Liam Gillick, and a focus on the Characters to be reactivated series by French art critic and theoretician Nicolas Bourriaud.

'A "Treatise on Abundance" (1638) and Early Modern Views of Poverty and Famine' is an edited English translation of Carlo Tapia's 'Trattato dell'abondanza'. First published in Naples in 1638, the treatise offered the earliest systematic attempt to develop and publicize the most effective tools available to governments to fight famine and poverty. In particular, Tapia moved the discussion of these issues away from traditional religious approaches and aimed instead to offer a theoretical understanding of the issues—based in part on his study of both classical sources and contemporary legal theories—and practical advice that could help administrators in the provinces and in the capital.

This book explores the US economy from 1960 to 2010 using a more Keynesian, Cowles model approach, which the author argues has substantial advantages over the vector autoregression (VAR) and dynamic stochastic general equilibrium (DSGE) models used almost exclusively today. Heim presents a robust argument in favor of the Cowles model as an answer to the pressing, unresolved methodological question of how to accurately model the macroeconomy so that policymakers can reliably use these models to assist their decision making. Thirty-eight behavioral equations, describing determinants of variables such as consumption, taxes, and government spending, are connected by eighteen identities to construct a comprehensive model of the real US economy that Heim then tests across four different time periods to ensure that results are consistent. This comprehensive demonstration of the value of a long-ignored model provides overwhelming evidence that the more Keynesian (Cowles) structural models outperform VAR and DSGE, and therefore should be the models of choice in future macroeconomic studies.

Technical Drawing 101 covers topics ranging from the most basic, such as making freehand, multiview sketches of machine parts, to the advanced—creating an AutoCAD dimension style containing the style settings defined by the ASME Y14.5-2009 Dimensioning and Tolerancing standard. But unlike the massive technical drawing reference texts on the market, Technical Drawing 101 aims to present just the right mix of information and projects that can be reasonably covered by faculty, and assimilated by students, in one semester. Both mechanical and architectural projects are introduced to capture the interest of more students and to offer a broader appeal. The authors have also created video tutorials for this book in which they demonstrate how to use many of AutoCAD's tools and commands. The CAD portion of the text incorporates drafting theory whenever possible and covers the basics of drawing setup (units, limits, and layers), the tools of the Draw, Modify, and Dimension toolbars, and the fundamentals of 3D modeling. By focusing on the fundamental building blocks of CAD, Technical Drawing 101 provides a solid foundation for students going on to learn advanced CAD concepts and techniques (paper space, viewports, xrefs, annotative scaling, etc.) in intermediate CAD courses. In recognition of the diverse career interests of our students, Technical Drawing 101 includes projects in which students create working drawings for a mechanical assembly as well as for an

architectural project. We include architectural drawing because our experience has shown that many (if not most) first-semester drafting students are interested in careers in the architectural design field, and that a traditional technical drawing text, which focuses solely on mechanical drawing projects, holds little interest for these students. The multidisciplinary approach of this text and its supporting materials is intended to broaden the appeal of the curriculum and increase student interest and, it is hoped, future enrollments.

Since taking their first steps on this planet, humans have changed the environment around them. Anthropocene: A New Introduction to World Prehistory tells the comprehensive story of human prehistory through the lens of anthropogenic environmental change. Each chapter explains how and why ancient humans transformed the Earth, linking prehistory to today's greatest global challenge. As they explore this record of the world's early people and societies, authors Joy McCorrison and Julie Field reject the traditional account of cultural evolution, instead presenting a thematic organization that highlights our Anthropocene narrative. Chapters are devoted to cities and agriculture, but also to such topics as technology, extinction, food production, writing and extractivism. Chapter 9, 'Individuals and Identity,' considers human identity and agency in more recent eras, and the book ends with a contemporary chapter that takes a hopeful look at the future.

Like sudoku, O'Ekaki (Paint by Numbers) provides an entertaining test of one's logic, using a grid as its playing field. But rather than leaving the player with boxes of numbers, O'Ekaki ends with a flourish: a fun piece of art that seems to magically appear when you've correctly darkened the final square grid. And each puzzle's title is an amusing clue to the picture that will ultimately emerge. The puzzle challenge on several levels, from beginning to expert, all resulting in a sometimes elaborate picture. And every one is designed by the inventor of O'Ekaki himself!

This book explores the different factors that can influence a new movie's prospects at the box office. Looking at factors such as the production budget, distribution model, genre, stars and audience reactions of films, Gunter asks how such aspects may reduce the uncertainties of success so common in the movie industry. The reader is taken on a journey through filmmaking factors that, research suggests, impact box office performance. While box office revenues represent only part of a movie's earning potential, Gunter highlights how theatrical performances remain central to what the movie business is about. The chapters illustrate how ticket sales are largely influenced by the production budget but also cultural differences and new movie platforms.
