Hepatology is an expanding field – it's hard to keep up. The liver has been sitting there the whole time, but the knowledge surrounding this perplexing organ is exploding; this makes it hard to prepare for board and recertification exams, where 1 in every 4 questions pertains to hepatology. Until now, there has been no single, slim, but high-yield volume that summarizes the hepatology you need to know for the boards. This book has it nailed. The authors have collected every pearl of wisdom, high-yield factlet, liver "board buzzword," hepatic micrograph, and classic liver imaging study they could muster, all while keeping the book a manageable size - because who has time for more than manageable when you're busy? The answer to your study questions (and study time!) can be found inside: *Acing the Hepatology Questions on the GI Board Exam: The Ultimate Crunch-Time Resource*. Traditional textbooks usually feature long and detailed discussions that are not directly related to Board and recertification exams. On the flip side, many Board review manuals provide lists and bullet points lacking sufficient background and context. Inside *Acing the Hepatology Questions on the GI Board Exam*, Drs. Brennan Spiegel and Hetal Karsan present time-tested and high-yield information in a rational, useful, and contextually appealing format. Why You Will Need to Read *Acing the Hepatology Questions on the GI Board Exam*: Focuses exclusively on Hepatology review – an area that comprises 25% of the Board exam Carefully vetted board-style vignettes with color images Comprehensive yet succinct answers using a high-yield format Emphasis on key clinical pearls and “board buzzwords” Answers to classic board "threshold values" questions that you need to know but always

seem to forget: If an echinococcal liver cyst exceeds XX cm, then the risk of rupture is clinically significant and surgery is warranted Rapid fire crunch-time exam with 135 classic one-liners such as: Spider web collaterals + caudate lobe hypertrophy = Diagnosis Stepwise fever + temperature-pulse dissociation + rose spots + hepatitis = Diagnosis With its focus on pearl after pearl, emphasis on images, and attention to high-yield “tough stuff” vignettes you don't know the answers to (yet), Acing the Hepatology Questions on the GI Board Exam is truly the ultimate crunch-time resource for acing often vexing liver section of the examination, taking recertifying examinations, looking good on clerkship rounds, or for just challenging yourself with interesting and entertaining vignettes.

The oral board exam for the American Board of Oral and Maxillofacial Surgery (ABOMS) can be intimidating to many surgeons due to the broad range of information one must know for the exam. However, while the examination guidelines provide a general outline of topics that may be covered, there is no true direction on how to prepare for it. Traditionally, candidates do so by using what are considered “underground” databanks, previous test questions, and power point presentations that run the gamut of commonly covered material. Until now, there have been no current comprehensive oral board review books available for the Oral and Maxillofacial Surgery boards. *Oral Board Review for Oral and Maxillofacial Surgery* fills that gap as the go-to resource for those attempting to successfully challenge the oral boards and for residents to polish up on their training. Edited and authored by top physicians in the field, this book is concise and easy to read, yet thorough with high yield information. An outline of the pertinent material is reviewed, and a patient work up is presented. Important questions to ask, signs to look for, and labs/images to order are included. It also includes tables and keywords that are typically mentioned on the exam and also offers explanations to some key points. Next are cases, which are presented in a question and answer format. As the case progresses, more complicated scenarios requiring management are presented. Lastly, complications are covered, which is the final section of each board scenario. Included are basic topics the surgeon needs to know, followed by topics that are nice to know, and numerous highly debated/complex questions that are discussed among candidates preparing for the exam. It should be noted that the authors are not privy to any inside information about the exam. What is presented is material candidates that have successfully

passed the exam feel is important to know. This book is not endorsed by American Association of Oral and Maxillofacial Surgeons or the American Board of Oral and Maxillofacial Surgery.
