Inhaltsangabe:Introduction: Within this thesis fundamentals of performance attribution are treated as well as the practical implementation of such a system. However, for many people who already asked to receive a copy of this work, the most important part will be the analysis of the (partly internet based) questionnaire revolving around performance attribution. The theoretical part contains the fundamentals of portfolio theory and the constructive CAPM, followed by basics of portfolio management. Next topics are the

estimation of risk and performance for investment portfolios. The finishing touch is done by introduction of performance attribution theories handling both, equity and bond attribution. Within the practical part a short analysis of the affected asset management company is performed, accompanied by research of performance presentation. A questionnaire has been sent to 80 non-banks of the German HDAX index as well as to all members of the BVI. Furthermore an internet based version of the questionnaire has been introduced to a large number of institutional clients. The analysis of this questionnaire is one of the topics of this work. For the affected company the results from the questionnaire are used to identify the competitors possibilities and the clients needs, resulting in fundamental ideas for the catalogue of requirements. The analysis of the investment process and based on this the choice and the implementation of a performance attribution system are the last parts of this work. Still it has to be mentioned that recommendations for organizational changes are part of implementation. There are three reasons why this thesis has been prepared. The first one is quite trivial. As performance attribution is more and more present in the market, deeper knowledge of it shall be gained for the affected company. Primarily the department for quantitative research and information technology has to come up with this knowledge to act as a multiplier and to ascertain technological and / or organizational requirements for its implementation. Another scope of this work is to determine the actual status of performance attribution performed by competitors. To get this information competition is referred to and likewise clients of competitors are interviewed. To benefit from this thesis not only the theoretical background will be looked upon, but there will be approaches to completely integrate performance attribution. Proposed usage will [...] This graduate level textbook proposes a different way of

Work disability does not only involve occupational disorders originating from the work or at the workplace, but addresses work absenteeism originating from any disorder or accident. This topic has become of primary importance due to the huge compensation costs and health issues involved. For employers it is a unique burden and in many countries compensation is not even linked to the cause of the disorder. In the past twenty years, studies have accumulated which emphasize the social causes of work disability. Governments and NGOs such as the World Bank, the International Labor Organization, and the Organization for Economic Cooperation and Development have produced alarming reports on the extent of this problem for developed and developing countries. However, no comprehensive book is presently available to help them address this emerging field where new knowledge should induce new ways of management.?

Best Practices for Knowledge Workers describes ACM, in non-technical terms, in the current era of digitization, Internet of Things (IoT), artificial intelligence (AI), intelligent BPMS and BPM Everywhere. Business readers will learn how support of adaptive, data-driven processes empowers knowledge workers to know in real-time what is happening at the edge points, and to take actions through the combination of rule-driven guidance

and their own know-how. It is not a traditionally-automated system but intelligent automation, where technology doesn't merely replace human decision-making but extends the reach of the knowledge worker; making IoT data actionable. Highly predictable work is easy to support using traditional programming techniques, while unpredictable work cannot be accurately scripted in advance, and thus requires the involvement of the knowledge workers themselves. The core element of Adaptive Case Management (ACM) is the support for real-time decision-making by knowledge workers. In award-winning case studies covering industries as a diverse as law enforcement, transportation, insurance, banking, state services, and healthcare, you will find instructive examples for how to transform your own organization. Recent evidence has shown that the successful setting of goals brings about positive outcomes in psychological therapy. Goals help to focus and direct clients' and therapists' attention in therapeutic work. They also engender hope and help energise clients. No longer are clients victims of their circumstances, but through goal setting they become people who have the potential to act towards and achieve their desired futures. Through the discussing and setting of goals, clients develop a deeper insight into what it is that they really want in life: a crucial first step towards being able to get there. Recent policies in both child and adult mental health services have supported the use of goals in therapy. However, the differing cultures, histories, psychologies, and philosophical assumptions of each form of therapy has brought about varying attitudes and approaches to goal setting. Working with Goals in Counselling and Psychotherapy brings the attitudes of all the major therapeutic orientations together in one volume. With examples from cognitive behaviour therapy, psychodynamic therapy, humanistic therapy, interpersonal therapy, and systemic therapy Working with Goals in Counselling and Psychotherapy truly is the definitive guide for therapists seeking to work with goals in any of the psychological therapies.

And as an extra dimension of usefulness, the book is accessible to lay readers, empowering families to make informed decisions and have a more active role in their own care. Included in the coverage: Essential skills for integrated case management. Children and youth with special health care needs. Transitional care and case management settings for children and families.
