The feminist campaign against pornography, the furor over a racial epithet in the O. J. Simpson trial, and Iran's continuing threat to kill Salman Rushdie exemplify the intense passions aroused by hurtful speech. Richard Abel offers an original framework for understanding and attempting to resolve these pervasive and intractable conflicts. Drawing on sociological theories of symbolic politics, he views such confrontations as struggles for respect among status categories defined by nationality, religion, race, gender, sexual orientation, and physical difference. Abel convincingly exposes the inadequacies of the conventional responses to speech: absolutist civil libertarianism and enthusiastic state regulation. Instead, he argues, only apologies exchanged within the communities that construct collective identities can readjust social standing damaged by hurtful words and images. In recasting the problem in terms of equalizing cultural capital, Abel opens a new pathway through the wrongs and rights of speech.

"Having been born a freeman, and for more than thirty years enjoyed the blessings of liberty in a free State—and having at the end of that time been kidnapped and sold into Slavery, where I remained, until happily rescued in the month of January, 1853, after a bondage of twelve years—it has been suggested that an account of my life and fortunes would not be uninteresting to the public."

production in Britain. The publication is of particular value because despite attracting growing academic interest in recent years, this field is still often subject to critical and institutional neglect. For the purpose of the Companion, the term 'black' is used to signify African, Caribbean and South Asian ethnicities, while at the same time addressing the debates concerning notions of black Britishness and cultural identity. This single volume Companion covers seven intersecting areas of black British cultural production since 1970: writing, music, visual and plastic arts, performance works, film and cinema, fashion and design, and intellectual life. With entries on distinguished practitioners, key intellectuals, seminal organizations and concepts, as well as popular cultural forms and local activities, the Companion is packed with information and suggestions for further reading, as well as offering a wide lens on the events and issues that have shaped the cultural interactions and productions of black Britain over the last thirty years. With a range of specialist advisors and contributors, this work promises to be an invaluable sourcebook for students, researchers and academics interested in exploring the diverse, complex and exciting field of black cultural forms in postcolonial Britain.

Keith McCord recounts the history of automotive onboard diagnostic systems and creation of the rudimentary OBD I systems and the development as well as the evolution of OBD II. Currently, OBD-II (OnBoard Diagnostic II) is the standard of the industry, and this book provides a thorough explanation of this system. It details its main features, capabilities, and characteristics. It shows how to access the port connector on the car, the serial data protocols, and what the serial data means. To

understand the diagnostic codes, the numbering system is defined and the table of common DTCs is shown. But most importantly, McCord provides a thorough process for trouble shooting problems, tracing a problem to its root, explaining why DTCs may not lead to the source of the underlying problem, and ultimately resolving the problem.

Design and optimization of integrated circuits are essential to the creation of new semiconductor chips, and physical optimizations are becoming more prominent as a result of semiconductor scaling. Modern chip design has become so complex that it is largely performed by specialized software, which is frequently updated to address advances in semiconductor technologies and increased problem complexities. A user of such software needs a high-level understanding of the underlying mathematical models and algorithms. On the other hand, a developer of such software must have a keen understanding of computer science aspects, including algorithmic performance bottlenecks and how various algorithms operate and interact. "VLSI Physical Design: From Graph Partitioning to Timing Closure" introduces and compares algorithms that are used during the physical design phase of integrated-circuit design, wherein a geometric chip layout is produced starting from an abstract circuit design. The emphasis is on essential and fundamental techniques, ranging from hypergraph partitioning and circuit placement to timing closure.

The film-book *The First Sail: J. Hillis Miller* is based on the documentary film of the same name made in 2010. The political, academic and environmental contexts surrounding this film since its release prove with more and more urgency the need to read and listen to J. Hillis Miller, and would require revisiting everything that has been said and seen. Together with the film transcript and an interview with Miller conducted by Taryn Devereux, the essays in this volume have been gathered from several international events devoted to Miller's works. With

essays by Henry Sussman, Sarah Dillon, Charlie Gere, Nicholas Royle, Éamonn Dunne and Michael O'Rourke, Dragan Kujundzic, Julian Wolfreys and J. Hillis Miller, The First Sail in itself thus forms a vast network of references, operating as an installation and network of emerging projects.
