The current fossil fuel-based system of mobility is associated with a wide range of environmental and social problems.

There is a growing body of literature on system innovations and transitions which has as a common understanding that long-term transformative change is necessary to deal with these complex problems. However, knowledge on the crucial role of citizen-consumers in sustainable mobility transitions is still underdeveloped. By incorporating the viewpoint of consumption patterns and everyday life routines, this book provides (new) knowledge on the role of citizen-consumers in sustainable mobility transitions. Theoretically, a practice based approach is developed as a novel framework to analyse, understand and influence transition processes to sustainable mobility at the level of everyday life. The focus in each of the three cases studies is on situated interactions between consumers and producers. Amongst these is an analysis of the role environmental information and subsidies in new car purchasing. Also, various examples in which an attempt was made to orchestrate a (modal) shift in commuting practices are examined. Each of the empirical case studies shows the important role of contextual factors in

understanding and influencing mobility behaviour of citizen-consumers. In addition, this book helps to understand how and why innovation in mobility practices takes place or not. Adopting a multi-disciplinary approach and using the case of the automotive industry as a starting point this volume discusses how industrial companies can remain competitive in spite of the current economic downturn.

Heavy industrialization in the past few decades has caused several global environmental issues including poor air quality, climate change, and outdoor air pollution-related diseases. As such, consumer pressure coupled with strict governmental policies have influenced firms to adopt and implement green practices in their supply chain and business operations in order to improve socio-environmental sustainability. *Global Perspectives on Green Business Administration and Sustainable Supply Chain Management* is an essential reference book that discusses innovative green practices including recycling, remanufacturing, reduction in waste and adoption of renewable energy in manufacturing. It also examines environmentally friendly policies that have been adopted by many European and Western countries. Featuring coverage on a broad range of topics such as energy analysis, environmental protections, and logistics development, this book is ideally designed for managers, operations managers, executives, manufacturers, environmentalists, researchers, industry practitioners, academicians, and students.

Over the past 100 years the European Automotive Industry has been repeatedly challenged by best practice. First by the United States, through the development of 'mass production' pioneered by Henry Ford and more recently by 'lean production techniques' as practised by the leading Japanese producers, particularly Toyota. It has consistently risen to these

challenges and has shown it can compete and even outperform its competitors with world-class products. However, the European industry is now faced with growing competition and growth from new emerging low-cost countries and needs to re-define its competitive advantage to remain at the forefront of the sector.

Automotive growth is driven by two factors, new markets and new technologies. Global competition is increasing, with technology and product differentiation becoming the most important sales factors, but with continued cost pressure. Within the market the winners will be more profitable and the losers will disappear. The Automotive Industry makes a significant contribution to the socio-economic fabric of the European Union. Manufacturing output represents €700 billion and research and development spending €24 billion. European automotive suppliers number 5000 member companies and represent 5 million employees and generate €500 billion in revenues. These are significant figures that generate wealth and high value employment within the EU.

European firms must consistently improve their competitive position to ensure that the industry does not migrate to growing new markets.

This book was born from curiosity. To begin with, it was the curiosity of an economist who studied in the 60's in an environment which has subsequently developed from national into global economics. Who has to recognize that politicians, scholars and large segments of society oblivious to supranational authorities and economic globalization forces continue to labour under the notion that they are still fully autonomous and sovereign when

shaping national economic policy. And pretend as though their own national state were still the "master in its own house" that despite unbridled market economics could continue to dictate to the economy and companies how to live and in which "rooms". All that has become fiction. The laws of globalization diminish the manoeuvring space for shaping national economic policy. Even if many folks today don't want to hear it: The issue is no longer achieving what is socially desirable for the own society but rather the optimal adaptation of society and social benefits to the politically practicable.

The book deals with pros and cons of Globalization and its focus extends both to the home and host countries. While Globalization has been beneficial it has not been without challenges for both home and host countries. There are many areas where the host countries, tend to benefit significantly, from Globalization. The interface with the global economy unleashes a lot of positive energy in the economic systems of the affected countries, particularly in the host country's economy. The book deals with the challenge of immigration, which the developed countries are facing, as an offshoot of inclusiveness that comes with Globalization. Increased debt intensity in some of the developed economies have resulted from their integration with the World economy, which many countries have witnessed since early 1990s. The book also delves into how the phenomenon of Globalization has been leveraged, by some countries more than others. While US has been the leader in unleashing Globalization, India, an effervescent democracy, have gained substantially, from this trend,

I misteri della Repubblica da Ustica al caso Calipari, le mazzette ai Talebani, la guerra degli americani contro la magistratura italiana, la partita per il nucleare, fatta di pressioni diplomatiche, tangenti e giochi di potere. Le trame del Vaticano, la compravendita e lo stoccaggio di armi, l'assalto delle multinazionali alle nostre istituzioni e al nostro mercato del cibo. C'è una parte del Paese che procede nell'ombra e che continua a sottrarsi all'opinione e al giudizio dei suoi cittadini. È l'Italia taciuta, non detta, che produce segreti, che coltiva rapporti sconvenienti, che si smentisce nei fatti. La stessa Italia che tuttavia non è sfuggita allo sguardo di WikiLeaks, l'organizzazione che ha aperto gli occhi di milioni di persone sull'inquietante serie di illeciti commessi da governi, istituzioni e aziende di mezzo mondo, e messo in crisi i Servizi segreti di molte nazioni. Per la prima volta in questo libro di Stefania Maurizi - l'unica giornalista italiana a cui Julian Assange ha consegnato i database segreti di WikiLeaks - vengono rivelate le informazioni

imposte, è necessario valutare gli aspetti relativi agli oneri contributivi ed assicurativi, al fine dell'eventuale deduzione dalla base imponibile IRAP. La disamina, alle cui fondamenta soggiacciono i principi contabili, si caratterizza per il gran numero di esempi – che, di fatto, rappresentano una sintesi delle casistiche più comuni che possono incontrarsi in azienda – volti a consentire un rapido approccio al lettore, soprattutto in quelle situazioni di particolare urgenza, come nel caso di dover calcolare il costo per esigenze di budget. Viene, infine, proposto un caso concreto di contabilizzazione del costo, partendo dal cosiddetto “cedolone”, vale a dire il riassunto avvenuto nel periodo di lavoro considerato.
