This book sets forth methods of designing and analyzing metal engineering structures of steel and aluminum. The first two chapters are devoted to the fundamentals of designing and the theory of analyzing metal structures and structural members with account of the material working not only in the elastic, but also in the elastoplastic stage. Chapters 3-5 describe various structural shapes and methods of joining together structural elements, the actual behavior of the joints and their investigation, as well as certain industrial requirements which the design of structures must meet. In chapters 6-8 the reader will find a detailed consideration of the principal elements of metal structures such as beams, girders, trusses, and columns, as well as information on crane girders and eccentrically loaded columns. The design of metal structures consisting of separate structural elements is the subject matter of Chapters 9 and 10. The exposition of this material is based on examples of industrial buildings and some special large-span and high structures. The last chapter sets forth the fundamentals of designing continuous sheet-metal structures (steel shells). All the material contained in the book conforms to the standards for designing steel structures and structures of aluminum alloys, as well as to the general building standards and regulations followed in the USSR.

From the Tyrannosaurus rex to Velociraptors, the Spinosaurus to Triceratops, Dinosaurs is a large board book, with beautiful illustrations by Neiko Ng, jam-packed with dinosaurs! There are seven themed scenes: forest, dinnertime, desert, swamp, the coast, volcanic eruption and prehistoric museum - with sturdy tabs for young children to find their favourite pages. Children can then explore the big scenes, find the dinosaurs and read the name labels in the panels. With a baby dinosaur to spot in each scene, there is plenty here for parents and children to talk about and return to again. Also available: Under the Sea, Wild Animals, Things That Go

Extensively researched and authoritatively and enthusiastically written, entries describe in detail the history of each particular company and of course the models for which they are famous.

Under Tony Blair's leadership, for the first time in a generation Labour has a realistic possibility of defeating the Conservatives. But is New Labour new enough? How does Blair's brand of modernization measure up to the changing shape of late-20th-century

politics?

This comprehensive and systematic survey of all the countries of East Asia, Southeast Asia, Australia, New Zealand and the Pacific Islands - from Afghanistan to Vietnam - presents statistics, directory material and informative essays on topics relating to contemporary and historical events in the region as a whole.

In recent years public attention has focused on an array of low-probability/high-consequence (LC/HC) events that pose a significant threat to human health, safety, and the environment. At the same time, public and private sector responsibilities for the assessment and management of such events have grown because of a perceived need to anticipate, prevent, or reduce the risks. In attempting to meet these responsibilities, legislative, judicial, regulatory, and private sector institutions have had to deal with the extraordinarily complex problem of assessing and balancing LP/HC risks against the costs and benefits of risk reduction. The need to help society cope with LP/HC events such as nuclear power plant accidents, toxic spills, chemical plant explosions, and transportation accidents has given rise to the development of a new intellectual endeavor: LP/HC risk analysis. The scope and complexity of these analyses require a high degree of cooperative effort on the part of specialists from many fields. Analyzing technical, social, and value issues requires the efforts of physicists, biologists, geneticists, statisticians, chemists, engineers, political scientists, sociologists, decision analysts, management scientists, economists, psychologists, ethicists, lawyers, and policy analysts. Included in this volume are papers by authors in each of these disciplines. The papers share in common a focus on one or more of the following questions that are generic to the analysis of LP/HC risks.

From the bestselling author of *A PLACE CALLED WINTER*, Patrick Gale's *THE WHOLE DAY THROUGH* is the beautiful structured story of the choices we make when we come face to face with our past. 'Wry, clever, faultlessly crafted' Guardian 'Poignant and acutely observed' Daily Express Laura Lewis has left her life in Paris and returned home to Winchester to care for her aging, but still sharp mother. Ben has moved away from his beautiful and loyal wife to support his brother, living alone since their mother's death. A chance encounter reminds them both of the relationship - and the spark - they once shared. In the course of a single summer's day, they come face to face with the feelings of love and regret they share, and the choices they must make; whether to be true to themselves, or to what they believe is the right thing to do.

Between 1909 and 1915 Eugène Atget produced seven albums filled with photographs of Paris at the height of its belle époque. This book presents Atget's albums in full for the first time, edited with the sequencing and repetition that the great photographer intended. In addition, Atget's pictures are analyzed in an altogether new way; as commercial picture documents produced by a photographer for the artists, archivists, antiquarians, designers, and builders who were his clients. *Atget's Seven Albums* is thus many books—a critical edition, a fresh view of Atget's work, a new kind of history of photography, and a social history of art and of Paris in the early twentieth century.

The authoritative account of the infamous runaway MP, by his daughter. 'A compelling account of an extraordinary political scandal, written from inside the Stonehouse family'. Martin Bell On 20 November 1974, British Labour MP and Privy Counsellor John Stonehouse faked his death in Miami and, using a forged identity, entered Australia hoping to escape his old life and start anew. One month later his identity was uncovered and he was cautioned; the start of years of legal proceedings. In a tale that involves spies from the communist Czechoslovak secret service, a three-way love affair and the Old Bailey, John's daughter examines previously unseen evidence, telling the dramatic true story for the first time, disputing allegations and upturning common misconceptions which are still in circulation. The story was never far from the front pages of the press in the mid-70s, and yet so much of the truth is still unknown. A close look at the political dynamics of the time; paced like a thriller, it's time for the world to know the real John Stonehouse.

This textbook, for second- or third-year students of computer science, presents insights, notations, and analogies to help them describe and think about algorithms like an expert, without grinding through lots of formal proof. Solutions to many problems are provided to let students check their progress, while class-tested PowerPoint slides are on the web for anyone running the course. By looking at both the big picture and easy step-by-step methods for developing algorithms, the author guides students around the common pitfalls. He stresses paradigms such as loop invariants and recursion to unify a huge range of algorithms into a few meta-algorithms. The book fosters a deeper understanding of how and why each algorithm works. These insights are presented in a careful and clear way, helping students to think abstractly and preparing them for creating their own innovative ways to solve problems.

Dante, the warrior son of a healer, was cursed by a high priestess to endure a never-ending cycle of life and death. Someone shares one of his past lives. Back then, she was his victim. Today, she is his savior. Her name is Mona Lisa.

Now, more than 20 years since its initial release, John Fiske's classic text Media Matters remains both timely and insightful as an empirically rich examination of how the fierce battle over cultural meaning is negotiated in American popular culture. Media Matters takes us to the heart of social inequality and the call for social justice by interrogating some of the most important issues of its time. Fiske offers a practical guide to learning how to interpret the ways that media events shape the social landscape, to contest official and taken-for-granted accounts of how events are presented/conveyed through media, and to affect social change by putting intellectual labor to public use. A new introductory essay by former Fiske student Black Hawk Hancock entitled 'Learning How to Fiske: Theorizing Cultural Literacy, Counter-History, and the Politics of Media Events in the 21st Century' explains the theoretical and methodological tools with which Fiske approaches cultural analysis, highlighting the lessons today's students can continue to draw upon in order to understand society today.

The step-by-step format of this text quickly demystifies UNIX and gives users the skills needed to put UNIX to work immediately.

Includes an overview of the system, basic system administration tasks, basic UNIX programming, and more.

Everybody is confronted with cloud computing. Whether you are a user, designer, programmer, project manager, or tester, sooner or later the cloud affects your work. If you are involved in selecting or implementing services from the cloud, or in keeping them up and running, this book will prove to be an invaluable resource. Testing Cloud Services covers an extensive list of risks that arise when implementing cloud computing, including some traditional risks and some completely new ones, and provides strategies for avoiding these risks and solving problems. Every risk is connected to existing, updated, and new test measures. It is necessary to start testing during the selection of cloud services, and continue end-to-end testing even after going live, as continuity risks arise all the time. With this book in hand, you will save a lot of time and discover an effective approach to testing that can be applied in practice immediately!
