Designed for teaching astrophysics to physics students at advanced undergraduate or beginning graduate level, this textbook also provides an overview of astrophysics for astrophysics graduate students, before they delve into more specialized volumes. Assuming background knowledge at the level of a physics major, the textbook develops astrophysics from the basics without requiring any previous study in astronomy or astrophysics. Physical concepts, mathematical derivations and observational data are combined in a balanced way to provide a unified treatment. Topics such as general relativity and plasma physics, which are not usually covered in physics courses but used extensively in astrophysics, are developed from first principles. While the emphasis is on developing the fundamentals thoroughly, recent important discoveries are highlighted at every stage.

The WTO is today dealing with an issue that lies at the interface of two major challenges the world faces, trade liberalization and international migration. Greater freedom for the "temporary movement of individual service suppliers" is being negotiated under the General Agreement on Trade in Services (GATS). Conditions in many developed economies - ranging from aging populations to shortages of skilled labor - suggest that this may be a propitious time to put labor mobility squarely on the negotiating agenda. Yet there is limited awareness of how the GATS mechanism can be used to foster liber.

Migrant Teachers investigates an overlooked trend in U.S. public schools today: the growing reliance on teachers trained overseas, as federal mandates require K-12 schools to employ qualified teachers or risk funding cuts. A narrowly technocratic view of teachers as subject specialists has led districts to look abroad, Lora Bartlett asserts, resulting in transient teaching professionals with little opportunity to connect meaningfully with students. Highly recruited by inner-city school districts that struggle to attract educators, approximately 90,000 teachers from the Philippines, India, and other countries came to the United States between 2002 and 2008. From administrators' perspective, these instructors are excellent employees--well educated and able to teach subjects like math, science, and special education where teachers are in short supply. Despite the additional recruitment of qualified teachers, American schools are failing to reap the possible benefits of the global labor market. Bartlett shows how the framing of these recruited teachers as stopgap, low-status workers cultivates a high-turnover, low-investment workforce that undermines the conditions needed for good teaching and learning. Bartlett calls on schools to provide better support to both overseas-trained teachers and their American counterparts.

also terms with different meanings, depending on their country of origin. For example, in the UK newspapers are called press media, while in the USA the term print media is more usual. In the UK, print usually applies to printed items, such as sales or educational literature. Likewise, there are big differences between European and American broadcasting systems, and sponsored radio or TV can mean different things around the world. Outdoor advertising also has different terminology in different countries, especially in North America and the UK. In many cases, alternative British and American terms are given, while some are either European or American. Some terminology is specific to a certain country. Entries have been collected from all parts of the world, including the oramedia or folk media of the Third World. Financial terms have been included because of their increasing importance in advertising and public relations, and the dictionary reflects the increasing relevance of satellites and computers. This book provides a detailed account of transnational practices undertaken by Indian 'high-tech' workers living in the United States. It describes the complexities and challenges of adapting to a new culture while clinging to tradition. Asian-Indians represent a significant part of the professional and 'high-tech' workforce in the United States, and the majority are temporary workers, working on contractual jobs (H1-B and L1 work visa category). Further, it is not

unusual for Indian immigrant workers to marry and have children while working in the U.S. Gradually, they learn to negotiate the U.S. cultural terrain in both their place of work and at home in the U.S. As such there is the potential that they will become transnational, developing new identities and engaging in cultural and social practices from two different nations: India and the U.S. Against this background, the book describes the nature and extent of transnational practices adopted by high-tech Indian workers employed in the United States on temporary work visas. The study reveals that the temporary stay of these professionals and their families in the U.S. necessitates day-to-day balancing of two cultures in terms of food, clothing, recreation, and daily activities, creating a transnational lifestyle for these young professionals. Transnational activities at the workplace, which are forced by the work culture of the MNCs that employ them, can be considered as 'transnationalism from above.' Simultaneously, being bi-lingual at home, cooking and eating Indian and Western food, socializing with Indian and American friends outside work, and all the cultural activities they perform on a day-to-day basis, indicates 'transnationalism from below'. The book is of interest to researchers and academics working on issues relating to culture, social change, migration and development.

A look at any newspaper's employment section suggests that competition for qualified workers in information technology (IT) is intense. Yet even experts disagree on not only the actual supply versus demand for IT workers but also on whether the nation should take any action on this economically important issue. *Building a Workforce for the Information Age* offers an in-depth look at IT workers-where they work and what they do-and the policy issues they inspire. It also illuminates numerous areas that have been questioned in political debates: Where do people in IT jobs come from, and what kind of education and training matter most for them? Are employers' and workers' experiences similar or different in various parts of the country? How do citizens of other countries factor into the U.S. IT workforce? What do we know about IT career paths, and what does that imply for IT workers as they age? And can we measure what matters? The committee identifies characteristics that differentiate IT work from other categories of high-tech work, including an informative contrast with biotechnology. The book also looks at the capacity of the U.S. educational system and of employer training programs to produce qualified workers.
