A beautifully illustrated book uses simple explanations to deal with the sensitive issue of how life begins.

Why cracking the code of human conception took centuries of wild theories, misogynist blunders, and ludicrous mistakes Throughout most of human history, babies were surprises. People knew the basics: men and women had sex, and sometimes babies followed. But beyond that the origins of life were a colossal mystery. The Seeds of Life is the remarkable and rollicking story of how a series of blundering geniuses and brilliant amateurs struggled for two centuries to discover where, exactly, babies come from. Taking a page from investigative thrillers, acclaimed science writer Edward Dolnick looks to these early scientists as if they were detectives hot on the trail of a bedeviling and urgent mystery. These strange searchers included an Italian surgeon using shark teeth to prove that female reproductive organs were not 'failed' male genitalia, and a Catholic priest who designed ingenious miniature pants to prove that frogs required semen to fertilize their eggs. A witty and rousing history of science, The Seeds of Life presents our greatest scientists struggling-against their perceptions, their religious beliefs, and their deep-seated prejudices-to uncover how and where we come from. "Where do babies come from?" It's a question every child asks eventually, and Animals Mate is the simple, straightforward guide every parent needs to normalize sexual reproduction via adorable animal partners. With a modern design and beautiful illustrations, Animals Mate introduces facts about mating, including tactful discussion of the mechanics of the process, anatomical parts, and sperm and eggs. Bypass the awkwardness that often accompanies "the talk," and help your child understand sex and reproduction as the natural and wonderful process that results in the world's greatest treasure: babies!

This book offers a psychoanalytic perspective on learning and teaching and on many of the issues which preoccupy those who work in educational institutions. It looks at the origins of learning in children's early relationships and at factors which help and hinder the educational process in later childhood and adolescence. Amongst the topics addressed in the book are the significance of play and playfulness, the impact of change, separation, times of transition, bereavement, bullying and racism. The author has aimed to set well-established psychoanalytic ideas about learning within the context of current educational practice and to look at the teachers' experience alongside that of the students. This volume is a collection of papers, each of which is a version of a lecture previously given as part of the Tavistock course, "Emotional Factors in Learning and Teaching; counselling aspects in education". The course, which is for teachers and others working in educational settings, has been running for more than thirty years.
