The Book of Squares by Fibonacci is a gem in the mathematical literature and one of the most important mathematical treatises written in the Middle Ages. It is a collection of theorems on indeterminate analysis and equations of second degree which yield, among other results, a solution to a problem proposed by Master John of Palermo to Leonardo at the Court of Frederick II. The book was dedicated and presented to the Emperor at Pisa in 1225. Dating

This volume demonstrates how literacy is more than learning to read and write. Literacy

creates communities, organizes personal and social lives, makes possible civil society and the rule of law, and underwrites the commitment of both modern and developing societies to universal education and ever higher levels of literate competence.

Everything that is involved in being and becoming literate is the concern of this interdisciplinary group of distinguished scholars.

This edited book brings together an international cast of contributors to examine how academic literacy is learned and mastered in different tertiary education settings around the world. Bringing to the fore the value of qualitative enquiry through ethnographic methods, the authors illustrate in-depth descriptions of genre knowledge and academic literacy development in first and second language writing. All of the data presented in the chapters are original, as well as innovative in the field in terms of content and scope, and thought-provoking regarding theoretical, methodological and educational approaches. The contributions are also representative of both novice and advanced academic writing experiences, providing further insights into different stages of academic literacy development throughout the career-span of a researcher. Set against the backdrop of internationalisation trends in Higher Education and the pressure on multilingual academics to publish their research outcomes in English, this volume will be of use to academics and practitioners interested in the fields of Languages for Academic Purposes, Applied Linguistics, Literacy Skills, Genre Analysis and Acquisition and Language Education. Laura-Mihaela Muresan is Professor of English at the

Bucharest University of Economic Studies, Romania. Concepcion Orna-Montesinos is a Lecturer at Faculty of Education of the University of Zaragoza, Spain. .

Financial statements give invaluable insights into the performance and future potential of a business. But they do not evaluate the accounting results they reflect. This book offers practical insights into the essential information that financial statements reflect.

This volume focuses on detailed studies of various aspects of Construction Morphology, and combines theoretical analysis and descriptive detail. It deals with data from several domains of linguistics and contributes to an integration of findings from various subdisciplines of linguistics into a common model of the architecture of language. It presents applications and extensions of the model of Construction Morphology to a wide range of languages. Construction Morphology is one of the theoretical paradigms in present-day morphology. It makes use of concepts of Construction Grammar for the analysis of word formation and inflection. Complex words are seen as constructions, that is, pairs of form and meaning. Morphological patterns are accounted for by construction schemas. These are the recipes for coining new words and word forms, and they motivate the properties of existing complex words. Both schemas and individual words are stored, and hence there is no strict separation of lexicon and grammar. In

addition to abstract schemas there are subschemas for subclasses of complex words with specific properties. This architecture of the grammar is in harmony with findings from other empirical domains of linguistics such as language acquisition, word processing, and language change.

Stock markets are not efficient, returns are incommensurate with risk, investors are irrational, bubbles and crashes recur regularly, analysts are usually wrong, economists even more so, luck is mostly mistaken for skill, myths and misconceptions abound and most of the industry participants are simply noise generators. This is even more true for emerging markets. South Africa can be termed a developed emerging market and is the newest member of the BRICS

group. The Effective Investor is the first book to deal specifically with investing in the South African stock market, filling a surprising gap given the widespread interest that has been shown in South Africa as an emerging market and the gateway to the resource-rich African continent. Understanding the South African market provides insight into the paths that emerging and frontier markets will follow in future. While the investment lessons from the South African market outlined in this book are universal, understanding some of its peculiarities is also important. For example, some insight into the behaviour of the currency, the rand, is clearly critical in terms of any investment in this market, as well as in providing some understanding of other volatile emerging market currencies, as well as because it is often treated as the most liquid proxy for these currencies, particularly during upheavals. Similarly, the techniques highlighted in the book for dealing with volatility are applicable to similar markets elsewhere. South Africa is also an attractive market in its own right. It has been the third-best performing stock market in the world since 1900, and has weathered the great financial crisis with flying colors. The book provides readers with the findings of leading-edge research conducted into the South African stock market, the results of which are normally reserved for professional institutions and is written by a practicing, top-rated investment professional. The book also has guest contributions from some

of South Africa's most astute professional analysts and fund managers on their specific areas of expertise, providing exceptional insight into current investment thinking. The Effective Investor is essential reading for every potential, novice or professional investor and investment adviser in emerging markets who wants to understand the most important principles of the South African stock market to ensure successful investing.
