Mathematical thinking, by contrast, is a specific way of thinking about things in the world. It does not have to be about mathematics at all, though I would argue that certain parts of mathematics provide the ideal contexts for learning how to think that way, and in this book I will concentrate my attention on those areas.

Solution of equations in consecutive natural numbers. a) (3,4,5) is the only solution to $n^2 + (n + 1)^2 = (n + 2)^2$ in natural numbers. The equality holds if and only if $n^2 - 2n - 3 = 0$. The quadratic factors as $(n + 1)(n - 3)$, which is 0 only when n is 3 or 1.

Mathematical Thinking Problem Solving and Proofs Solution ...

Mathematical thinking, algebra, and number systems are fundamental tools for understanding many aspects of reality. You should also know that, in my experience, students who copy homework solutions score roughly 20% lower on exams than their colleagues who do their homework, since they never grappled with the material, nor learned how to solve problems.
