BTUs (British Thermal Units) are the measurement of how much hot air can be removed from the air in relation to the square footage of the room. You need about 20 BTUs for every square foot of space: a 300 square-foot room would need a portable AC unit with at least 5,000 BTUs while a 500 square foot room would require at least 12,000.

Hello Ron, for a 200 sq ft you would need a 5,000-8,000 BTU portable air conditioner. The minimum size of small portable air conditioners is 8,000 BTU. It would make sense to opt for a 8,000 BTU device; it always better to have a bit bigger unit as opposed to having a device that's a bit too small. Reply

## **ENERGY STAR Certified Room Air Conditioners | EPA ENERGY STAR**

A BTU (British Thermal Unit) is a rating used to determine the heating or in the case of an Air Conditioner the cooling capacity of an appliance. Typically a minimum of 7000 BTU is needed to cool a small room, whereas commercial units can reach up to 25,000 BTU and beyond. Simply, the greater the BTU, the larger the space that the unit can cool.

## **Air Conditioner Installation | Appliances Direct**

Choosing between a small window air conditioner or a larger model comes down to the size of the space you want to cool. Cooling capacities are typically stated in terms of BTU rating, which is a number that essentially tells you how quickly and energy-efficiently a unit can cool a room. If you purchase an AC with too few BTUs, it may not be ...
