Network Flows and Linear Programming 16.1 The Steepest Ascent Hill Climbing Algorithm We have all experienced that climbing a hill can take a long time if you wind back and forth barely increasing your height at all. In contrast, you get there much faster if energetically you head straight up the hill.

Network Flows and Linear Programming

Formulating and solving network problems via linear programming is called network flow programming. Any network flow problem can be cast as a minimum-cost network flow program. A min-cost network flow program has the following characteristics.

Chapter 10: Network Flow Programming - Carleton

Network Flow Optimization problems form the most special class of linear programming problems. Transportation, electric, and communication networks are clearly common applications of Network Optimization. These types of problems can be viewed as minimizing transportation problems.
