Local prototypes only model a small portion of the system. Local prototypes can be used to resolve differences in opinion over design; make a local prototype of the alternatives and evaluate them [Spool et al., Product Usability: Survival Techniques, CHI'98, pp. 113-114]. Global prototypes can address issues of completeness and consistency.

Prototype theory is a mode of graded categorization in cognitive science, where some members of a conceptual category are more central than others. In this theory, any given concept in any given language has a real world example that best represents this concept. For example: when asked to give an example of the concept furniture, a couch is more frequently cited than, say, a wardrobe.

Prototype allows us to take shortcuts and make quick judgement and decisions. On the other hand, it may sometimes block some new information and force us to focus on our pre-existing ideas, making us less open and flexible. Needless to say, prototypes can contribute to prejudice based on race, ethnicity, or social status.
