Computer - Computer - History of computing: A computer might be described with deceptive simplicity as “an apparatus that performs routine calculations automatically.” Such a definition would owe its deceptiveness to a naive and narrow view of calculation as a strictly mathematical process. In fact, calculation underlies many activities that are not normally thought of as mathematical.

Cache Only Memory Architecture (COMA) The COMA model is a special case of the NUMA model. Here, all the distributed main memories are converted to cache memories. Distributed - Memory Multicomputers – A distributed memory multicomputer system consists of multiple computers, known as nodes, inter-connected by message passing network. Each node acts as an autonomous computer having a processor, a local memory and sometimes I/O devices.
