The authors present four numerical methods in detail: quadrature, composite trapezoidal, adaptive quadrature and Gauss-Legendre Integration. Each theory is followed by an example Matlab programs. The authors wrap up the text by talking about differential equations and partials differential equations.

Numerical methods are used to solve initial value problems where it is difficult to obtain exact solutions • An ODE is an equation that contains one independent variable (e.g. time) and one or more derivatives with respect to that independent variable. • In the time domain, ODEs are initial-value
