The purpose of this study was to describe the MR arthrography appearance of the glenolabral articular disruption (GLAD) lesion. Proper diagnosis of this lesion is important because it can be a source of persistent shoulder pain that requires surgical repair and because it is often difficult to diagnose clinically.

**The glenolabral articular disruption lesion: MR ...**

The purpose of this study was to assess the diagnostic accuracy of strain and shear-wave elastography for determining targets of varying stiffness in a phantom. The effect of target diameter on elastographic assessments and the effect of depth on shear-wave velocity were also investigated.

**A Comparative Study of Strain and Shear-Wave Elastography ...**

Percutaneous treatment of hydatid cysts is relatively new, and the data related to it are limited. The purpose of this study was to provide additional data to strengthen the proof of its effectiveness. One hundred sixty-eight hepatic cysts in 111 patients were treated using a percutaneous approach under sonographic and fluoroscopic guidance.
