### **Poverty Food Insecurity And Nutritional**

Among school age children, neither poverty nor food insecurity is associated with nutritional outcomes, while among adults and the elderly, both food insecurity and poverty are predictive.

These results suggest that researchers should be cautious about assuming connections between food insecurity and nutritional outcomes, particularly among children.

### **Poverty, food insecurity, and nutritional outcomes in ...**

Food insecurity is a significant dimension of childhood poverty, but implications for schooling are poorly understood. Analyses of nutrition, food security and literacy among children in 100 villages in northwest China are performed. Long-term undernourishment and food insecurity strike the poorest disproportionately, but not exclusively.
