Dissecting a kidney reveals the many subtle features of the body's filtering system. Looking at a fresh sheep's kidney we can identify three features. The ureter, renal vein and renal artery. The ureter is the long tube that takes the urine from the kidney to the bladder.

Biology-kidney dissection

The kidney was placed into the dissection tray and examined thoroughly prior to dissection. Identification of the ureter and blood vessels was performed. A knife was used to make a coronal cut of the kidney in order to examine the interior structures. Photographs were taken as structures were identified. The sheep kidney is very similar to a human kidney.

Kidney Dissection Worksheets & Teaching Resources | TpT

This is a plain preserved specimen. Dissect the kidney of an adult sheep to discover the location and/or look of parts of the kidney, such as the renal artery, the renal pelvis, the ureter, the renal cortex, and more. Due to limited availability of sheep kidneys, we may occasionally substitute pig kidneys. Pig kidneys are slightly larger, just as easy to dissect, and have identical external and internal features.
