Introduction. A simple functional classification of heart failure (HF) patients first suggested by the New York Heart Association (NYHA) has been used clinically for almost a century. 1 It has long served as a foundational tool for risk stratification of HF and determines clinical trial eligibility and candidacy for drugs and devices. Whereas it is widely acknowledged that NYHA classification ...

Introduction. The concept of disproportionate secondary (functional) mitral regurgitation (SMR) was proposed in 2018¹ to help explain the conflicting results of two randomised clinical trials of transcatheter edgeto-edge mitral valve repair (TEER) compared with medical therapy^{2 3} in which substantial differences in the severity of SMR relative to left ventricular (LV) size were apparent.
