Properties of therapeutic protein formulations are described and include opalescence, phase separation, color, and subvisible particles. An emphasis is placed on material and process testing to ensure success during manufacturing. The drug product manufacturing process, which includes the process of compounding to filling, is also covered.

Therapeutic Protein Technically, any protein-based drug is a “therapeutic protein,” but the term was first used to describe medicines that are genetically engineered versions of naturally occurring human proteins. A protein is a large molecule comprised of a long chain of amino acids that is folded into a three-dimensional shape.
