Tracking and Data Fusion: A Handbook of Algorithms (Bar-Shalom, Y. et al; 2011) [Bookshelf]

Abstract: This book covers one of the most important applications of estimation theory - multiple object tracking or multi-target tracking. It contains 16 chapters and an extensive bibliography.

This paper is concerned with the principles of data fusion for two or more Kalman filters tracking the same target. Each filter receives a sequence of measurements from its own sensor and the measurement errors are independent for different filters. However, the estimators of the target position which they produce are not independent of one-another because they involve the same process noise ...

Another specific type of data fusion is called “sensor fusion” where data from diverse sensors are combined into one data-rich image or analysis. Data fusion is broadly applied to technologies, for instance, in a research project, scientists might use data fusion to combine physical tracking data with environmental data, or in a customer dashboard, marketers might combine client identifier data with purchase history and other data collected at brick-and-mortar store locations to build a ...

What is Data Fusion? - Definition from Techopedia

Data fusion is an important issue for object tracking in autonomous systems such as robotics and surveillance. In this paper, we present a multiple-object tracking system whose design is based on multiple Kalman filters dealing with observations from two different kinds of physical sensors.
