Line From 2 Points.

Example, Practice ...

Example: $y = 2x + 1$ is a linear equation: The graph of $y = 2x + 1$ is a straight line . When x increases, y increases twice as fast, so we need $2x$; When x is 0, y is already 1. So $+1$ is also needed; And so: $y = 2x + 1$; Here are some example values:

Linear Equations - MATH

If a vertical line

Download Ebook Writing Linear Equations Algebra 2 Answer Key

intersects the graph of a relation in two or more points, then the relation is not a function. A 3. A linear function is a function whose ordered pairs satisfy a linear equation. A 4. The slope of a line is the change of x-coordinates divided by the change of y-coordinates. D 5. A vertical line has an undefined slope. A 6.
